Earnings To Push Markets Higher In 2018!

It gives me immense pleasure to announce that we are launching our new mutual fund (MF) magazine. The MF magazine will be on the flip side of your favourite DSIJ magazine and it will also be the India's first fortnightly MF magazine which will purely focus on equity MF schemes. I am proud to launch such a magazine that is going to change the way people look at selecting equity mutual funds for investments in India. Backed by a strong, experienced and dedicated team of MF researchers, our new MF magazine promises to enlighten and support MF investors who are looking to create wealth in these volatile markets.

The size of the mutual fund industry is nearly ₹23 lakh crore and has seen a growth of nearly 26 per cent in FY18 alone. The size of the equity mutual funds is nearly ₹7.5 lakh crore and the AUM in equity mutual funds increased by 38 per cent YoY. There is visible interest in equity mutual funds amongst investors as they know that MF investing is one of the safest ways to take exposure to equity markets.

Do note that DSIJ is widening its horizon with the introduction of an additional Mutual Fund journal along with the regular magazine for the benefit of the readers. Our regular magazine content and format will continue as before since pages are being increased for accomodating the new Mutual Fund section. Since it will be our first issue, I will be eager to hear your feedback. Do send us your honest feedback and assist us in understanding your MF investing needs so that we can serve you better.

Markets to my mind will try to settle down and attempt to remain less volatile in the near future. Sensex is already up by nearly 4 per cent from its recent lows and it promises to inch up further in the near to medium term owing to some expected positive news on the earnings front. I am aware that the increased volatility on a YTD basis has led to a lot of speculation on whether the markets will deliver in 2018 as per investors expectations. In my view, markets should deliver good returns in spite of several headwinds this year and the best part of the markets will be the earnings growth. The earning growth, NPAs bottoming out for banks, increased government spending and improved macroeconomic indicators do make a case for double digit returns in the key benchmark index, i.e Sensex in 2018.

India has underperformed its emerging market peers lately and there is a good chance that India will catch up with the other emerging economies. I expect emerging markets to remain relatively less volatile going forward and deliver higher returns compared to the developed markets. Even within the emerging market space, India should do better.

In this issue, we have discussed where the Sensex can go in 2018. I am confident Sensex will cross 38,000 by December 2018. I think the trade war fears are overdone and the slugfest between the US and China is actually a blessing in disguise for long term investors as they may get opportunities to buy shares at cheaper prices. In our special report on dividend stocks, we have shared some interesting aspects of dividend investing. I am sure you will benefit from our findings and you will use these findings to create some wealth for yourself.

We have also covered tourism sector in our separate special story. The sector is ripe for investments now and you will find out the reasons for this optimism in our detailed report. Don't miss the recommendation in the sector.

For investors, no doubt the perceived geopolitical risk is high and there are so many external factors such as trade war that occupy their minds. Smart investors should be able to capitalise on investing opportunities in 2018 as the volatile market environment does provide scope for the same. Focus on the stocks of private banks and companies in infrastructure, cement, select metals and even real estate business as this is where the action will be. Not to ignore stocks that are dependant on consumption theme in India. Consumption related stocks should also do well.

Focus on value in stocks rather than prices alone - Happy Investing !

F&O

I would be grateful if you could provide details on why a particular company's F&O would be suspended for trade. I am following HDIL and according to the recent news, the stock was about to be suspended from trade in F&O from April onwards. Please elaborate on the following: 1) Why a stock's F&O would be suspended? 2) Will the suspension affect the stock price? - ***Raghuveer Kona***

Editor Responds: *Thank you for writing to us. Stock exchanges stop issuing fresh contracts on a security if the stock fails to meet the eligibility criteria for three consecutive months. For inclusion in the F&O segment, a stock is chosen from among the top 500 stocks based on average daily market capitalisation and average daily traded value in the previous six months on a rolling basis. The stock's median quarter sigma-size (average of median buying and selling price) should not be less than Rs 10 lakh. Also, the market-wide position limit in the stock should not be less than Rs 300 crore. Generally, this will negatively impact the stock price; however, we don't have data to substantiate this assertion.*

Corrigendum : *In our Vol. 33, Issue no. 8, dated March 19-April 1, 2018, under the "Choice Scrip" section on page no. 14, we have stated that "EL is the third largest agricultural tractor manufacturer". However, it should read "EL is the fourth largest agricultural tractor manufacturer". The error is regretted.*

Market Watch

Q4FY18 Results To Provide Direction To The Markets

In the fortnight gone by, the market sentiment saw buoyancy after the RBI revised India's growth projection upwards for the current fiscal to 7.4 per cent and lowered the inflationary forecast to 4.7-5.1 per cent for the first half of FY19. The strong trading in European shares on the easing of concerns about a sharp rise in the US interest rates also helped boost investors' sentiment.

On the global front, American markets continued their downward trend. In the last two weeks, Dow Jones fell 1.1 per cent, whereas S&P 500 slipped 2.03 per cent. Nasdaq, with a fall of 4.23 per cent, was the worst performing global index. European markets were on a recovery mode. UK's FTSE100 outperformed its European peers with a gain of 4.28 per cent. Germany's DAX and France's CAC40 recovered 3.85 per cent and 3.79 per cent, respectively. Asian markets showed mixed sentiments. Hang Seng was down 2.30 per cent during the fortnight whereas Nikkei managed to put up positive returns of over 3 per cent during the same period. China's Shanghai exchange remained flat.

On the domestic front, bullish sentiments prevailed in the Indian markets during the last two weeks as both Sensex and Nifty notched up gains of over 2 per cent. All the sectoral indices traded in the green during the period under consideration. The small-cap and mid-cap indices managed to challenge the negative sentiments with positive returns of 5.67 and 4.51 per cent, respectively, in the two-week period. The auto index led the recovery in the domestic markets with a gain of 5.72 per cent. The metal and realty indices, which had witnessed maximum fall in the previous fortnight, also recovered 1.92 and 2.08 per cent, respectively. FII have been net sellers, having sold equities to the tune of ₹1,491.38 crore, whereas the domestic institutional investors have been net buyers, lapping up equities worth ₹6,794.10 crore.

The effects of the ongoing probes and developments in the various banking loan default cases are also not likely to die down any time soon, keeping the market volatile and investors on their toes. However, the oncoming quarterly earnings season may significantly overshadow all other events in the markets.

The small-cap and mid-cap indices managed to challenge the negative sentiments with positive returns of 5.67 and 4.51 per cent, respectively, in the two-week period. The auto index led the recovery in the domestic markets with a gain of 5.72 per cent.

Now, the markets are keenly awaiting the start of the quarterly earnings season, which is expected to set the tone of the market for the next few weeks going ahead. The forecast of notable earnings growth and margin expansion in Q4 results is likely to inspire a positive trajectory on the bourses for most of the sectors. In the earnings season, metals and IT sectors may see a bullish trend on the bourses on the back of strong Q4 numbers; whereas banking, telecom and aviation sectors are more likely to suffer a setback. While the earnings data will majorly set the tone for the markets for the coming few weeks, it is also likely to further decide the direction of the market in FY19.

VA Tech Wabag

THE BUOYANT 'TREATMENT' FOR YOU PORTFOLIO

HERE IS WHY

Positive macroeconomic growth factors

Attractive order book

Positive Valuations

VA Tech Wabag Limited is engaged in the business of water treatment. A holding company, the company's principal activities include design, supply, installation, construction and operational management of drinking water, waste water treatment, industrial water treatment and desalination plants. The company operates across the world and has a product portfolio of water reclamation, municipal used water treatment, industrial effluent treatment, anaerobic sludge treatment and industrial water reuse and recycling. The company's India cluster provides end-to-end water solutions for drinking water and wastewater plants, both in the municipal and industrial sectors. The European cluster caters to small and mid-sized projects. The MEA cluster has two major regions including Middle East and Africa, while the LATAM cluster has countries, including Brazil, Chile, Colombia, Ecuador, Mexico and Peru.

The company is bagging huge orders, both in the domestic as well as international markets. It recently bagged orders in Tobruk in Lubya worth ₹140 crore, besides orders from Dangote in Nigeria and from Reliance Industries in India. By the end of 2017, the company boasted of an order book of ₹7,200 crore, including a large order from an oil and gas company in Saudi Arabia. Further, the company is also likely to bag an order worth ₹4500 crore under the Namami Gange project.

The company will also be participating in the bids for sewage treatment in the states of Maharashtra, Tamil Nadu, Delhi and Karnataka. With the growing inclination of the governments towards infrastructure and water supply, the company is well-placed to reap the benefits of these developmental activities. Moreover, the United Nations' initiatives towards a sustainable development as the agenda for 2030 is likely to create more opportunities for the company as a crucial agent in the movement. Exhibiting a strong revenue visibility, the company is expected to witness an increase in profitability in the coming period.

On the financial front, the company's revenue increased 21.03 per cent from ₹380.82 crore in Q3FY17 to ₹480.89 crore in Q3FY18. The company's PBDT also improved 1.923.70 per cent to ₹62.33 crore in Q3FY18 from ₹3.08 crore in Q3FY17. The company's net profit also rose from ₹0.5 crore in Q3FY17 to ₹41.14 crores in Q3FY18, registering a stupendous increase of 8,128 per cent. On an annual basis, Va Tech Wabag Ltd posted 18.83 per cent increase in its revenue to ₹1,798.38 crore in FY17 from ₹1,513.43 crore in FY16. The company's PBDT declined by 40.59 per cent to ₹135.57 crore in FY17 on a yearly basis. The company's net profit also decreased by 56.62 per cent to ₹74.98 crore from ₹117.43 crore for the corresponding period.

The company's debt-to-equity ratio stood at 0.15x for FY17, significantly lesser than 0.31x in the previous fiscal, exhibiting a positive trend. Its average ROE stood at 9.38 per cent in FY17. At present, the company is trading at PE of 22.6x, while the industry PE is 53.70x. As the stock has significantly corrected, it is the right time to invest in the stock. We recommend our reader-investors to **BUY** this scrip.

Sanwaria Consumer Ltd (SCL)

CHANTING THE GROWTH MANTRA WITH PATANJALI

HERE IS WHY

Robust financials

Tie up with Patanjali

Product diversification

Sanwaria Consumer Ltd (SCL), a part of the Sanwaria Group, is an FMCG company engaged in the business of manufacturing and selling of rice, edible oil and staple food products like pulses, sugar, soya chunks, wheat glour, rice flour, salt, suji, maida, besan, daliya, soya meal, etc. SCL is one of the largest integrated food processors in India.

Recently, SCL entered into an agreement with Patanjali Ayurved to manufacture and supply soya chunks or soya bari under the 'Patanjali Brand'. SCL had been supplying chakki-fresh atta to Patanjali in the past. The management of the company expects more such agreement in the near future and looking forward to long association with Patanjali for its other products like soyabean oil, rice bran oil and Basmati rice etc.

Also, Patanjali has recently tied-up with online platforms or virtual marketing networks like Flipkart, Amazon, Bigbasket, Grofers, etc. SCL's products will also be available on all these platforms. Further, considering the leadership position of Patanjali in the FMCG sector in India, the management of the company is confident of a favourable impact on the overall topline and bottomline growth of the company in the coming quarters. Also, earlier in January this year, the company launched 10 new products and increased its product range from 25 to 35.

On the financial front, on a standalone basis, the company's revenue increased 11.64 per cent from ₹1,140.67 crore in Q3FY17 to ₹1,273.49 crore in Q3FY19. The company's PBDT also soared drastically by 127.99 per cent to ₹33.97 crore in Q3FY18 from ₹14.9 crore in Q3FY17. The company's net profit also rose from ₹11.4 crore in Q3FY17 to ₹25.08 crore in Q3FY18, registering an increase of 120 per cent.

On an annual basis, Sanwaria Consumers Ltd posted 29.74 per cent increase in its revenue to ₹3,512.44 crore in FY17 from ₹2,707.21 crore in FY16. The company's PBDT surged by 20.02 per cent to ₹57.43 crore in FY17 on a yearly basis. The company's net profit increased by 180.42 per cent to ₹43.97 crore in FY17 from ₹15.68 crore in FY16.

On the valuation front, the company is trading at a price-to-earnings ratio of 17.98x as against its peer Umred Agro Complex (61.42x). The company has a debt-to-equity ratio of 2.44x. The company's return on equity (RoE) and return on capital employed (RoCE) stood at 13.36 per cent and 8.48 per cent, respectively. The company is expected to post good quarterly numbers. SCL has good consistent profit growth of 20.86 per cent over the past five years. The stock is currently trading at around ₹20 after correcting from a high of ₹33.

SCL's profits have doubled on a TTM basis due to the tie-up with Patanjali to supply biscuits and also due to formation of a subsidiary in Dubai. With normal monsoon expected in the northern belt and SCL's expanding presence, we expect the company to continue to do well going forward. We recommend our reader-investors to **BUY** the stock.

SUNDRAM FASTENERS

CMP - ₹587

BSE CODE	Volume	Face Value	Target	Stoploss
500403	8024	₹1	₹682	₹549

Sundram Fasteners is an auto component company engaged in manufacturing of high tensile fasteners, motor vehicle parts and accessories. During FY17, the company reported 11.58% and 14.97% growth in domestic and exports sales to ₹1837.89 crore and ₹1044.11 crore, respectively. This was on the back of rise in sales of passenger vehicles, utility vehicles and two-wheelers. Going forward, the expectations of good monsoon and implementation of the Pay Commission recommendations may boost auto sales and thereby create demand for the company's products. The company posted a robust bottomline growth of 47%, keeping operating and non-operating costs at a bare minimum. Despite demonetisation and the GST, the company posted consistent topline and bottomline growth every quarter since December 2016. Transition to BS-IV norms and further change over to BS-VI by 2020 is expected to boost demand for the auto component makers. The company has low D/E ratio and high interest coverage. Further, FY17 has reported positive net cash flow for the first time after FY13.

NIFTY Index Chart Analysis

Nifty climbs at snails pace sans momentum

Nifty has rallied almost 450 points from March low of 9950, its major support level. Both FIIs and DIIs are seen pouring funds into the Indian equities, though at lower volume and at slower pace. The FIIs have yet again returned to the emerging economies after the world's two largest economies got embroiled in a tariff trade war. China retaliation against Donald Trump imposition of tariffs on two metals with tariffs on 106 US products worth 50 billion dollars has dampened market sentiments, but the possibility of negotiations between the two countries refrained the markets from slumping.

The DIIs turned to the markets again after the sell-off from the HNIs seemed to have got over with the easing of LTCG tax apprehensions. Further, better than expected auto sales numbers for March month and the financial year lifted up stocks of the auto majors and thereby the markets. RBI kept the interest rates unchanged, notwithstanding the high inflation. However, Nikkei Manufacturing PMI recorded a five-month low at 51 amid slowdown in order inflows and overall business. On the contrary, the Services PMI increased to 50.3, which is above the minimum expansion level of 50. The growth was on the back of greater inflows from New York, leading to an increase in the staff at the fastest pace in the last seven years.

Going forward, we have Q4FY18 corporate earnings at the doorstep, which will drive the markets in the coming sessions. Further, the monsoon, which is expected to be normal at 100% of the long-period average of 87 cm, will add to the positive sentiments if the corporate earnings depict revival and global geopolitics maintains the status quo, if not improvement.

Technically, after bouncing back from 9950 levels, Nifty witnessed a reversal, may be in the form of a pullback. Nifty resisted at 10200-10250 levels from where it was expected to retreat. However, after consolidating at those levels for a few sessions, Nifty broke out of the levels, taking major support at the 200-day EMA level. The upside is not supported by momentum, where the volumes have been relatively lower than those witnessed during the downfall and the 14-period RSI too is lying at 55 level, though it has given a breakout at 48. Nifty is giving gradual upside because of very less momentum in the frontline stocks.

In case Nifty continues to take baby steps northwards, we hold 10475-10500 as immediate resistances, above which Nifty holds the potential to touch our major trend reversal level of 10630, followed by yet another crucial level of 10705, which is the 61.8% retracement of the weekly downward rally from the all-time high to double bottom at 9950-9960. However, post the volatile session on April 10, if Nifty retreats, we hold 10245-10250 as the resistance-turned-support level for the index, provided that 10315 is breached on the downside. Further, 10180-10130 will act as supports.

Roadmap for the next 15 trading sessions

Ideas	Nifty Levels	Action to be Initiated	Probable Targets
Resistance for the medium term	10425-10475	Close above 10425-10475 on the daily chart on closing basis would give further momentum to the bulls.	10630
Support for the medium term	10245	Close below 10245 on the weekly chart would change the trend and trigger a retreat.	10180-10130

STOCK RECOMMENDATIONS

GENESYS LTD ..... BUY ..... CMP ₹305

BSE Code : 506109 | Target 1 ..... ₹339 | Target 2 ..... ₹345 | Stoploss....₹276(CLS)

The stock of Genesys International Corporation is currently trading at ₹305. Its 52-week high and low stand at ₹390/₹144.90 made on October 11, 2017 and May 23, 2017, respectively. After hitting a kind of double top on October 11 and November 27, 2017, at ₹388-390 levels, which is also the all-time high level, the stock traded with lower tops. With this, the stock has formed a downward sloping channel pattern on the daily time frame, except for a false downward move from February 2-7. Recently, on April 5, the stock gave a pattern breakout at the ₹278 level. Thereafter, the stock surged and is now consolidating just above its immediate resistance at ₹306 level. The volumes are justifiable and rhe 14-period RSI is quoting at 67, which suggests that the momentum will continue. On the weekly time frame, the current week is the third consecutive uptick and the uptick will confirm if the stock sustains at ₹309 on a closing basis.

INDIAN HOTELS LTD ..... BUY ..... CMP ₹137

BSE Code : 500850 | Target 1 ..... ₹147 | Target 2 ..... ₹155 | Stoploss....₹125 (CLS)

The stock of Indian Hotels is currently trading at ₹137. Its 52-week high/low stand at ₹160.60/₹101.42, which were made as on July 21, 2016 and December 27, 2016, respectively. Considering the weekly time frame, the stock, after hitting its 52-week high, tumbled sharply up to 61.8% retracement of the prior upward rally. The stock has been giving a range-bound movement thereafter between its 38.2% and 61.8% retracements at ₹125-139 levels.

The ₹125 level also acted as the 200-day EMA support for the stock. Considering the daily time frame, the stock bounced back from March 26 after taking major support at ₹125-mark and surged up to ₹141-142 level, which is its multiple resistance level. The stock is trailing at the 38.2% retracement of the prior rally from ₹125. It has also formed a kind of inverse head & shoulders pattern with neckline at ₹141-142 levels.

(Closing price as of Apr 9, 2018)

*LEGEND: ■ EMA - Exponential Moving Average. ■ MACD - Moving Average Convergence Divergence ■ RMI - Relative Momentum Index ■ ROC - Rate of Change ■ RSI - Relative Strength Index

Bandhan Bank

THE GROWING 'BANDHAN' OF MICROFINANCE

The initial public offer (IPO) of the Bandhan Bank was the talk of Dalal Street last month. The ₹4473 crore IPO was oversubscribed 14.6 times. Following the strong investor response to the issue, the bank made a blockbluster debut on the bourses, getting listed at a premium of about 30 per cent over its issue price. Read on to find out the prospects of the bank going forward.

Company Background

Bandhan Bank Limited (BBL) is a commercial bank focusing on serving under-banked and under-penetrated markets in India, which is a high-yield business (NIM of 10.7 per cent for 9MFY18) and which also enjoys the priority sector lending (PSL) benefits.

The bank began in 2001 as an NGO named Bandhan Konnagar with the purpose of providing microfinance services to socially and economically underprivileged women in rural part of West Bengal. Over the years, the BBL has transformed itself from an NGO to an NBFC and now to a bank. BBL launched its banking business in the second quarter of FY16 with a greenfield network of 501 bank branches and 50 automated teller machines (ATMs), which it has now expanded to 887 bank branches and 430 ATMs in Q3FY18, serving a general banking customer base of over 2.13 million. The bank majorly operates in eastern and north-eastern parts of India with West Bengal and Assam contributing major operations of the bank.

The bank has a very healthy business mix. On the asset side, the retail loans comprise micro loans, SMEs and small enterprise loans. The bank's 96.5 per cent of the gross advances are PSL compliant. On the liabilities side, as of Dec 17, the bank had a deposit base of ₹252.9 billion, of which 33.2 per cent was CASA and 85.01 per cent deposits were retail in nature. Also, as of Dec 17, the bank had advances of ₹243.6 billion, gross and net NPA of 1.67 per cent per cent and 0.8 per cent, respectively, and high return ratios of 25.6 per cent (RoE) and 4.1 per cent (RoA). Prior to demonetisation, the bank's NPAs had never gone beyond 0.5 per cent.

Low cost and extensive distribution network

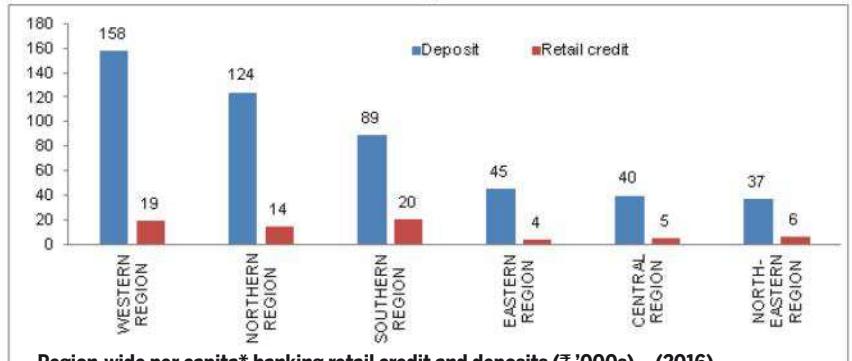
BBL's distribution network is relatively low cost, which is a result of 'hub and spoke' model of using DSCs and bank branches, as well as focusing on tech initiatives. BBL has strategically located DSCs in close proximity to micro loan customers to provide them customised services in a timely manner. Around four to six DSCs are linked to a single bank branch. The bank staffs its DSCs with six to seven employees and equips the DSCs with handheld devices connected to the core banking system. Because of the relatively low staff strength and the fact that it does not need full-scale IT systems, DSCs provide a cost-effective means of extending the branch network.

Being a bank, BBL is able to source funds at lower costs (through deposits) compared to other microfinance players. This gives BBL an advantage over other MFIs as BBL can price its loans lower than other MFIs without sacrificing any spread. A combination of these factors allows BBL to generate high RoE.

Under-penetration of credit and banking services in India

Although rural India contributes 47 per cent of India's GDP, its share in total credit outstanding is only 10 per cent, vis-à-vis 90 per cent for urban India (as of FY16). This extreme divergence in the share of rural areas in India's GDP and banking credit is an indicator of the very low penetration of banking in rural areas.

Lower share of northern and eastern regions in total bank credit and deposits Indian banking credit and deposits are predominantly concentrated in the southern and western regions, whereas banking credit and deposit penetration have been empirically low in the northern and eastern regions. Banking retail credit per capita in the eastern region is the lowest, and is five times lower than the southern region. Low per capita retail credit in eastern, central and north-eastern regions shows the low penetration of banks in these regions compared with other parts of the country. This provides an opportunity for the bank to further penetrate these regions and expand its reach in specific areas within them.



Region-wide per capita* banking retail credit and deposits (₹ '000s) – (2016)

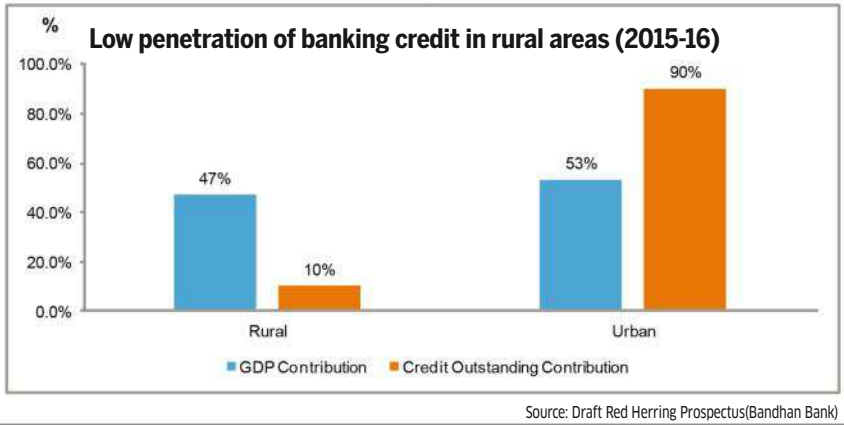
Source: Draft Red Herring Prospectus(Bandhan Bank)

Microcredit sector

The gross loan portfolio (GLP) of MFIs grew at 51 per cent CAGR from FY13 to FY17. This growth was fuelled largely by the growth in GLP of various large players, such as Janalakshmi Micro-finance, Bharat Financial Inclusion, Ujjivan Financial Services, among others. There are many unorganised moneylenders in the domestic micro-finance industry. Hence, there is large scope for MFIs to grow their portfolio by covering areas that are least penetrated and where there is predominance of unorganised players.

Enhancing digital platform

BBL has established internet banking facilities, a mobile banking app, online and mobile payment modes for cashless payments, e-commerce payments through 'Verified by Visa' and Rupay Pay Secure, and other online payment and other services. The bank is also implementing online investment options to allow customers to invest in mutual funds and buy shares in initial public offerings. BBL has also adopted payment systems such as the Unified Payment Interface, the Bharat QR Code and the Aadhaar-Enabled Payment System, in addition to online KYC and other services. Such digital and technology platforms are expected to reduce operating costs, risks, errors and help the bank operate with greater cohesiveness and efficiency.



Source: Draft Red Herring Prospectus(Bandhan Bank)

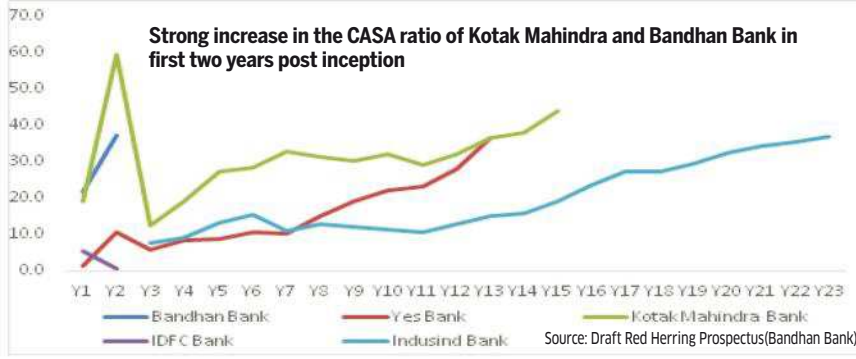
Customer-Centric Approach

The bank designs customer-centric products such as offering educational micro loans and healthcare micro loans. On the liability side, BBL offers products such as variety of daily deposits, recurring deposits, and other services. In addition, the bank provides financial education and

borrower's training to certain groups of current and potential customers, helping them increase their financial literacy and willingness to take micro loans.

To boost share of non-interest income BBL is planning to complement its interest income with non-interest income from other sources to diversify its income stream and improve margins. Besides selling PSLCs to non-PSL compliant banks, BBL plans to generate fee income through distribution of third-party insurance and mutual funds. The bank also plans to commence distribution of life insurance products as corporate agent for which it has received a licence from the IRDAI. The bank has commenced remittance services as well, which will provide a stream of non-interest income.

Comparative analysis of the evolution of new private banks since inception Bandhan Bank was the only player to begin operations with over 500 branches. Most of its branches are micro branches catering mainly to retail customers. With its strong retail presence and high number of branches, BBL's CASA ratio was approximately 28.18 per cent in its second year of operation, which was well above many other new private banks during their initial stages.



Note: Year of inception of banks are: Indusind bank – 1994, Kotak Mahindra bank – 2003, Yes bank – 2004, Bandhan Bank – 2015 and IDFC bank – 2015

Associated Risks

A considerable portion of BBL's operations are located in East and North-East India, which makes it vulnerable to risks associated with having geographically concentrated operations. Also, BBL handles cash in a high volume of transactions occurring through a dispersed network of its branches and DSCs. Hence, it is exposed to operational risks, including fraud, petty theft, etc., which could harm its operations and financial position. Further, Bandhan Bank's operations involve transactions with relatively high risk borrowers (unsecured loans). In the event of non-payment by a borrower, BBL may be unable to collect the unpaid balance which could adversely affect the business, operational results and financial condition.

Bandhan Bank Ltd	
BSE Code : 541153	**CMP : ₹514.45**
Market Cap (₹Cr.)	61,906.58
Price to Book	6.96

Axis Bank	1,33,385.16	2.03	36.15	0.96

Conclusion

Being a bank, BBL was able to ride the recent MFI crisis smoothly unlike NBFCs and MFIs. So, in the current form, BBL is a robust and resilient micro loan financier with great growth prospects. Further, the bank is expected to benefit largely from financialisation of household investments, especially in the rural and under-banked areas; the experienced and professional team backed by a strong independent board; vast branch network and presence in high growth segments of micro lending, retail and SME banking. Given the high valuations, we recommend our reader-investors to **HOLD** the stock from a long term perspective.

Cover Story

Trade war- A blessing in disguise for long term investors!

With multiple factors inducing volatility in equity markets, it is important that investors play the markets cautiously in 2018. **Yogesh Supekar** and **DSIJ research team** assess the outlook for the markets in CY18.

The year 2018 saw markets touching all-time high levels and market conditions at the beginning of the year indicated as if we were set for another year of the bulls. However, the way things are panning out, the enhanced volatility in the markets is giving enough hints to the investors that 2018 is not going to be a déjà vu year like 2017. Indeed, the year 2017 was one of the best years for equities in terms of risk-adjusted returns. The average draw down of Sensex for any given year in the past 22 years has been 15.74 per cent. In other words, if we calculate how much Sensex has come down from its opening levels at the start of the year, we find that on an average Sensex has come down by 15.75 per cent if we consider the data for the past 22 years. However, in the year 2017, Sensex came down by a mere 0.99 per cent, thus indicating the solid uptrend in the markets. If we go by the law of averages and consider that the year 2018 will show up an average performance, Sensex may go down during the year by 15.75 per cent from its opening levels. Sensex opened near the 34,000 level in 2018. A 15.75 per cent draw down from those levels would mean that Sensex can come down by 5300 points in 2018 from its opening levels, which suggests that Sensex can touch 28,700 levels anytime during the year.

Global Indices : Best performing indices on YTD basis (2018)

Index		YTD returns (%)
HNX 30	Vietnam	18.07
Karachi 100	Pakistan	15.26
Bovespa	Brazil	11.53
Tadawul All Share	Saudi Arabia	10

Sensex made its recent lows at around 32,383 levels and recorded its all-time high of 36,442 in January 2018. Sensex is already down by 7.73 per cent per cent

from its all-time high and is down by 1.2 per cent on a YTD basis.

While the consensus is that the market will remain volatile, the million dollar question remains how much can markets correct and how far can it go on the upside?

NSE PE Ratio		
Date	P/E	
18-Apr-17	23.08	Lowest P/E in one year
23-Jan-18	27.81	Highest P/E in past year

the positive impact of the tax rate cuts on stock prices.

In India, the year ahead promises to be full of action as there are several local events that may affect the market sentiments. There are elections in at least five states and the outcomes of these elections will influence the market moods significantly.

Indian Markets Have Underperform its Emerging Market Peers

Pankaj Karde,

Head- Institutional Sales & Sales Trading, Systematix Shares & Stocks (I) Ltd.

What is your Sensex target for December 2018?

We expect Sensex to see 30500-31000 levels at the end of December 2018.

Do you see IT stocks outperforming in 2018 ?

IT stocks would be outperforming the broader indices. We believe Infosys and TCS are poised to outperform. We believe stock-specific outperformance to come in 2018.

What are key risks that investors should keep in mind while investing in CY18?

Rising crude oil prices needs to be closely watched. Rising crude oil prices may lead to increase in WPI. Elections in key states such as Karnataka, Mizoram, Chhattisgarh, MP and Rajasthan along with Lok Sabha elections in early 2019, would keep driving market directions. Rising interest rates in India is one important risk to look out for. Banking sector issues still continue to haunt the markets. NPA issues in PSU banks need to be tracked closely.

Which sectors are clear avoid in your view in CY18?

I believe when the markets are in correction mode, the best thing to do is to buy India story. Global sectors such as metals, oil and gas should be avoided. Also, pharma stocks with significant international business should be a clear 'avoid'. PSU banks have become very attractive on valuation basis and hence do not fall in this category.

Where will Sensex go in 2018?

Given the US President Donald Trump's haphazard decision-making so far, it is only logical to expect some increased volatility in the stock markets. Having said that, the negative impact on the stock prices in the US markets can be offset by

Rajat Jain, *CIO*, Principal PNB Asset Management Company

How will the markets behave in 2018?

The Indian economy has been seeing a weakening macroeconomic environment as a result of higher current account deficit, likely stress on the fiscal deficit number for FY 19, and rising, though still moderate, inflation. Rising crude prices, continuing problems with NPAs of banks, especially the public sector banks, and a busy election season are the other challenges at the macro level. However, at the ground level, we are seeing strong consumption demand, especially in the rural areas. There is a broadening capex cycle outside of the infrastructure sector and a bottoming out of corporate earnings which are positives. In this situation, the market movement will be a factor of fund flows. We expect global fund flows into EMs to be choppy and while domestic investors have continued to invest in equity, further volatility could have an impact on these flows. In terms of valuations, the markets are trading at a slight premium to historical numbers. Overall, we expect the markets to move sideways during the year with substantial volatility in between.

Where do you see outperformance coming from for FY19?

We are positive on domestic cyclicals like autos, auto ancillaries, cement and select stocks geared to capital spending. While we were underweight in IT stocks in our portfolio, we have reduced our underweight position in the past couple of quarters. Further, we have seen some mid-cap stocks correcting substantially, and while they may not be in the value zone, we think they are at a level where they can give reasonable returns over the next 2-3 years.

What is your take on the banking NPA problem? Have banks bottomed out?

We are seeing an economic recovery, the consumption demand remains robust and incrementally the industry is going for capital expenditure as brownfield projects and tactical capacity addition. The infrastructure sector is seeing good work in railways, roads and port sector. In this scenario, things look to be on a path of recovery and hence creation of fresh NPAs seem to have peaked. However, while fresh NPA creation could have peaked out, there would be aging-related provisions and those resulting from RBI directive. For the last quarter (Q4FY2018), the RBI directive on NPA recognition should have a meaningful impact on net NPAs. This may necessitate further recapitalisation of select PSU banks.

Manav Chopra, *CMT - Head Research - Equity*, Indiabulls Ventures

Where is Nifty headed in your view ?

Nifty defends the key support levels and hints for a retracement rally towards the 10,450-10,600 levels.The index recovered immediately post the breakdown and defended the 10,100 support zone mentioned in the previous publications. With emergence of bullish reversal candlestick and price exceeding its previous week highs indicates a bullish reversal from the oversold levels and hints for a retracement rally in the near term. The weekly support of 10,100-10,050 levels if held expects a possible rally towards the 10,450 and, thereafter, 10,600 level, which is the 38.2-50% retracement of the recent decline.

What is your Sensex target for December 2018?

Sensex is in a long term rising channel formation and has recently observed a corrective decline from the recent peak. There is a strong support zone at 32,500, which is likely to provide cushion in the near term in case of decline. One can expect target of 35,100 by the year end.

Which index in your view will outperform ?

Auto index expects relative outperformance and returns of 20-25%. The index has been in a long term rising channel since past 7 years. The current trend remains intact and is expected to test the upper end of the channel in the long-term. The expected target for the pattern is around the 17,400 and 18,200 levels, which is likely to be achieved by early 2019.

Nitasha Shankar, *Sr. Vice President and Head of Research*, YES Securities (I)

What is your expectation on earnings growth in FY19?

We expect earnings growth to be in the range of 14-15%.

Which sectors will outperform in your view in FY19?

We remain positive on auto, auto ancillary, infra, farm mechanisation space, rural consumption themes, crop protection as well as building material sectors.

What are the key risks facing markets ?

Mismatch of expectations of domestic retail investors and its impact on the fund flows towards Indian equities (through domestic mutual funds)

What is your Sensex target for December 2018?

While we would like to refrain from giving an absolute value, we believe it will be difficult for the benchmark indices to make new highs this year. Stock-specific investing approach would be the way to go.

Rahul Sharma
Senior Research Analyst, Equity99

"We believe the Sensex has potential to touch **38,000** this year."

Out of the last **26 years**, the Sensex had a negative closing eight times.

Sensex on an average has given **2.58 % returns** in April.

With earnings expected to grow in the range of 15 to 16 per cent for Sensex stocks, there is a possibility that Sensex can reach 38,000 levels, assuming markets trade at similar P/E multiples.

Any positive surprise in the earnings front can push the Sensex closer to the 40,000 level. It might take both P/E expansion and earnings growth to take Sensex closer to 40,000 level. The current Sensex P/E is closer to 23, while it had touched 26.38 in January when Sensex was trading at 36,283 levels. A P/E expansion and earnings growth is what the bulls will be betting on in the coming year.

RBI monetary policy and interest rate Outlook for 2018

The ongoing nascent recovery in the Indian economy needs to be nurtured through stable macro-financial management. In line with the market expectation, the Reserve Bank of India (RBI) in its first bi-monthly policy for FY18-19 kept the key rates on hold and maintained its neutral stance. The Monetary Policy Committee (MPC) also lowered inflation projections for the full financial year 2018-19, hinting that there would be a long pause in the RBI policy rates and there would not be any rate hike during the current calendar year.

The rising interest rates is a global trend and the fear amongst the investors is that the rising interest rates may affect the flow of portfolio capital into emerging markets, including India. The 'carry-trade' portfolio money will be naturally affected due to rising rates and that may not augur well for equity prices

Although the RBI has lowered its inflation forecasts, the central bank still continues to sound a lot of caution on various macro-economic aspects that are likely to pose upside risks to inflation. For instance, the oil prices continue to remain elevated as well as volatile. Also, there is not much clarity on how the higher minimum support price and related policies announced in the Union budget will be implemented. This could have a significant impact on retail food inflation. Further, the risk of fiscal slippage, at both the Central and state levels, still prevails. Furthermore, if the monsoon turns out to be deficient, it will have consequences for both inflation and government expenditure.
In addition to the above factors, the growing tensions in trade relations and faster than expected tightening of monetary policy in the US can affect

"The 10-year bond yield has fallen to almost 7.15 per cent which augurs very well for equity market. The 10-year bond yield approaching 7.7 per cent in February this year was one of the key triggers for the sharp losses on the Indian bourses. Now, falling bond yields should surely help earning multiples to increase"

Shailendra Kumar
Chief Investment Officer
Narnolia Securities Limited

Lakshmi Iyer,

CIO (Debt) & Head - Products, Kotak Mutual Fund

What is your take on interest rate scenario in CY18?

The RBI has lowered its CPI inflation projection in the recent monetary policy review meeting. Additionally, the recent reduction and spacing out of the govt borrowing programme has been a great boon to the ailing bond yields. If this trend continues, fiscal deficit would well be under control. This could mean a lid on yields on the higher side. We, therefore, expect yields to remain soft, albeit moving in ranges.

How do you expect the bond yields to behave in coming year?

Given that H1FY2019 government borrowing is less than 50% of the total issuances, it offers respite to the rising bond yields. In that, the reduced CPI range by the RBI also offers a very high comfort to bond prices. We are of the view that policy rates in India could be on an extended pause, which bodes well for rates. Additionally, if we see further opening up of FPI limits, it could further accentuate the positive sentiment. The key would be to watch for crude oil prices.

capital flows and con worsen the overall investment climate.

The latest monetary policy surely pacifies the nerves of Indian investors in an immediate sense. The fixed income investors are expected to continue to stay invested in the long duration funds.

Crude Oil: Outlook 2018

Crude oil is expected to remain firm in 2018 owing to several recent developments such as -

1. Sanctions on Venezuelan oil industry
2. Tension between Saudi Arabia and Iran,
3. Global oil producers limiting supply,
4. Improving economic fundamentals and synchronised global economic growth

Trade wars and its impact on equity markets

Global equities are witnessing selling pressure owing to the ongoing trade war initiated by the US President Donald Trump. Such frequent talks on trade restrictions and tariffs on US imports from China has managed to pull down the global equities considerably. The worst hit index in past one month, since the trade war talks surfaced, has been Nasdaq, which is down by 8.54 per cent and Dow Jones Industrial Average (DJIA) which is down by 5.54 per cent. It

> "Trade wars are Good and easy to Win"
>
> **Donald Trump**

remains to be seen how long the hostile trade environment persists. A full-blown trade war, which would be an extreme situation, could cost the global economy $470 billion, according to Bloomberg Economics. In a scenario where the US implements a 10 per cent levy on imports and the rest of the world retaliates, analysis by Bloomberg Economics says the global economy would be 0.5 per cent smaller by 2020 than it would have been without tariffs.

The situation of a full-blown trade war, though less likely, cannot be ruled out either, owing to the political repercussions of such announcements by the US President.

At present, due to the increased volatility in the developed markets, the emerging markets have come up as safe havens for global institutional investors. The emerging markets such as India have been less volatile relative to the developed markets such as the US in past month and there is good chance of outperformance in the emerging market space in FY19 when compared to the developed world. This may lead to increased portfolio flows

> "America – which accounts for 9 per cent of world exports and 14 per cent of world imports – is by no means a dominant superpower."
>
> **Paul Krugman**

into markets such as India even after discounting the increased pressure from increasing interest rates globally.

Investors should keep in mind that while trade war fear affects mostly export-oriented companies (stocks), domestic stocks which have sales mostly in India have also reacted negatively. The fundamentals of these companies have not changed significantly, so the correction can be seen as an opportunity to accumulate more of these stocks at a lower price.

Before taking a negative view on the trade war fears, one needs to understand that nothing substantial has been announced yet by the Trump administration. So far only a 25 per cent tariff on US imports of steel from China and a 10 per cent tariff on the imports of aluminium from China has been announced. These announcements are nowhere near the threats that Trump had given during his campaign suggesting an across-the-board 45 per cent tariff on all imports from China.

There is a strong chance that the trade war fears will subside and the fundamentals

IPOs :-

The year gone by, i.e CY17, will be remembered as a great year for the IPO market, where as many as ₹75,475.37 crore were raised, thus reflecting a whopping 65 per cent growth in the amount of money raised over CY16. The total number of companies that tapped primary markets in CY17 stood at 38, which is a good 31 per cent higher when compared to the year 2016. The CY18 promises to be yet another year where investors can anticipate quality issues hitting the markets. Already in CY18 ₹19,070.28 crores have been raised so far.

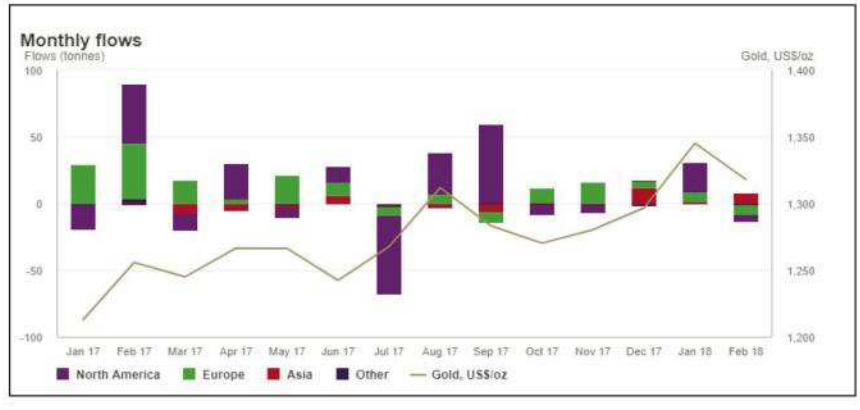
will take over. Markets will start focusing on the core earnings as the sentiment improves.

GOLD OUTLOOK 2018

Gold is generally considered a safe haven investment option once stocks start declining. Expectedly, the year 2017 was not as eventful for gold since equities and crypto-currencies were on a dream run. Although gold prices went up by 10 per cent for a day or two, the returns for the year was around 6 per cent. In fact, in the December quarter, the return from gold was just around 1 per cent due to selling pressure on gold during the last quarter as investors decided to park their funds in equities. Gold demand plunged 25 per cent in the September quarter after the government brought gold within the purview of the Prevention of Money Laundering Act. Although the annual gold demand was up 9 per cent year-on-year at 726.9 tonnes in 2017, it was still much lower than the five-year average of 810 tonnes. However, the scenario changed over the last few weeks after the US-China trade war kicked off.



On January 1 this year, gold was quoting ₹29,525 per 10 gm, which went up to touch ₹30,830 per 10 gm in the last week of March, increasing by over 4.4 per cent. In spite of such appreciation in value, sales of old gold in the first quarter have dropped by 35-40 per cent compared to the previous quarter, which shows investors' conviction in the yellow metal. The vigour in the activity in gold is expected to return around Akshaya Tritiya, which is on April 18 this year and is considered an auspicious day to buy gold.

> "Unlike in CY2017, equity markets are likely to see higher volatility in CY2018. With the Middle East remaining volatile, we are likely to see gold outperform equity in 2018."

R Sreesankar
Co-Head - Institutional Equities, Prabhudas Lilladher Pvt

Technically speaking :-
Gold: (USD/OZ)

Since January 2018, gold, the brightest of all commodities, has witnessed a range-bound movement from nearly 1300-1355 levels. Weak global cues and simultaneously depreciating US dollar have together put gold prices in doldrums. Considering the broader view, on the weekly time frame, gold has formed a cup and handle pattern, which was initiated in the first week of July 2016. The commodity attempted to breakout at 1354 levels in January 22 week of 2018, but failed to sustain the levels on a closing basis and, since then, it has been moving in a range. Further 1300 acts as 50% retracement of the previous sharp upward rally from 1236 levels. Moreover, gold also has a flag pattern in the making, with the said range-bound movement after a sharp rally. Thereby, going forward, we hold 1350-1355 as the major resistance above which gold may test 1400-1455, followed by 1480 in the medium term. On the downside, 1270-1250 would act as the support levels.

Globally, the economies fared well in 2017 and the trend is expected to continue in 2018. As incomes rise, the demand for gold jewellery and gold-consuming technology products, such as smartphones and tablets, rises. Income growth also spurs savings, thereby increasing the demand for gold bars and coins. The interaction between investment and consumption results in gold's lower correlation to other mainstream financial assets, which makes it an effective diversifier. Also, according to the World Gold Council, the global gold-backed funds added 25.3 tonnes of gold over the first two months of the year. Additionally, Asian funds grew assets by 10 per cent, while European-listed funds had outflows, with both regions reversing their 2017 trends. This interest is likely to remain high this year, because the reasons for which these investors bought gold-to hedge against overvalued markets and insure against the increasing possibility of a crisis-have not materialized yet. We expect gold to get back its sheen in 2018.

Conclusion :-

Dwindling amidst the winds of trade war, market correction and domestic reforms, the Indian stock markets are increasingly looking wayward and uncertain presently. However, the markets may register a significant turnaround, pushing the Sensex to over 38,000 levels on the back of good corporate earnings potential by the year end.

While the unfolding of major global and domestic events on both business and political fronts may result in an extended bumpy ride for the investors in 2018, the seemingly strong earnings outlook for FY19 is portraying a brighter picture for equity returns during the year.

FY19 being a significant year for Indian politics, it may witness an increased government spending during the year, which will augur well for businesses as well as the Indian stock markets. The launch of major government schemes and a more aggressive implementation of government policies, especially infra-structural development, during the year will most likely put an end to the jitters of the investors.

Markets, which are already in the mood to factor in severe correction as seen in the first few months of 2018, may also throw up ripe opportunities for value investors and traders in 2018. The year must see a shift in focus of the investors from the index levels to individual stocks to reap the most from the markets.

Chirag Mehta

Sr. Fund Manager - Alternative Investments, Quantum AMC

Do you see gold outperforming equities in FY19 ?

We have always recommended to have an allocation to gold at all times given its negative correlation to equities, which makes it an effective portfolio diversifier. So, for investors' asset allocation, it has to be an allocation to both gold and equities at all times. Having said that, there are risks galore to equities this year given deteriorating global and Indian macros. As we approach the national elections, there are risks such as higher MSP, rising inflation and fiscal slippages. Globally, with interest rates moving up, reduced liquidity from central banks and the possibility of trade war can impact risk markets. Given the macroeconomic and geopolitical backdrop, gold could well be poised to deliver returns over the medium to long term.

Are Gold ETFs attracting investors?

Investors usually get convinced on an Investment after it posts a decent return. In other words, investors usually chase returns. Gold after a spell of losses for three years from 2013 to 2015, has generated positive returns for last two years, but not enough to attract investor attention. Although in the short term, there are some headwinds for gold given the Fed rhetoric of tightening, global macros have been increasingly turning supportive. So far, Investor selling has reduced significantly in gold, but they are yet to return on the buying side. History suggests that investors will come back once gold delivers sizeable returns .

High Dividend-Paying Stock: The Anchor in Turbulent Times!

High dividend-paying stocks are most sought after by investors looking for regular income. Tanay Loya finds out some interesting aspect on dividend paying stocks

Equity as an asset class is considered inherently volatile. The objective for any long-term investor is to maximise the return for the given level of risk. In other words, the whole equity game is to maximise risk-adjusted returns over a given period. This is exactly where the 'dividend-yield stocks' come into picture. Dividend yield stocks not only contribute in the form of regular income, but also display low volatility, which can be a useful characteristic in a stock. Says Uttam Jain who has been into markets for more than two decades, "I find investing in dividend-paying stocks comfortable as they don't jump up and down as several other non-dividend paying stocks do, be it large-cap or mid-cap. Not to forget the cash flow that I generate from dividend income. It helps."

High dividend paying stocks are considered less volatile and provide the much-required regular income, thus contributing to the total return component of any stock. While the benefits of including the high dividend-paying stocks in the portfolio are known, one needs to be careful in identifying such high dividend-paying stocks, since not all the high dividend paying stocks have proven to be productive.

How do we identify a good dividend-paying stock?

The basic principles of identifying a good stocks can be applied when identifying a good dividend-paying stock as well. While identifying dividend-paying stocks, one needs to scan for those stocks that are reflecting rising dividend payout ratio, which often gives insight on the stability of the company.

If a company has a history of consistently paying dividend where it is observed that there is a steady increase in the dividend payout ratio, it indicates that the company management is able to deliver on revenue growth and income growth front and is willing to share the profits with the shareholders on a regular basis. One needs to also separately identify those companies which have distributed one-time high dividends owing to extraordinary performance in a particular season or due to some windfall gains.

A. Promoter holdings and dividend behaviour:-

We find that companies where the promoter holding is high have a tendency to distribute higher dividends. For a sample data of 127 companies, where the promoter holding is more than 50 per cent and the average dividend yield is higher than 2 per cent, we find that the average returns delivered in the past one year is 28.23 per cent (* data as on April 3, 2018). Thus, the average performance of these stocks reflects outperformance by almost 17 per cent when compared to Sensex. During a similar time frame, BSE 500 has gained nearly 11.20 per cent.

Top 5 dividend paying performers

Company	Dividend yield(%)	1 year Return(%)
Goa Carbon	3.86	782.94
Venky's (India)	5.77	279.02
Precision Wires India	4.47	131.47
Savita Oil Technologies	4.1	53.88
Gabriel India	8.57	25.56

B . EPS growth vs DPS growth

Further, we studied the performance of the constituents of BSE 500 whose earnings per share (EPS) growth is higher than dividend per share (DPS) growth and also for those companies whose DPS growth is higher than the EPS growth.

We find that out of the 500 companies, there are 192 companies which had greater DPS growth than EPS growth over the previous five years. The average annualised returns for these 192 companies whose DPS growth is greater

LTCG can deter investors from investing in capital gain stocks From April 1, 2018, the government decided to reintroduce the Long Term Capital Gains (LTCG) tax at 10%. This will make investors decide on whether to go for capital gains that will reduce their returns on their investments or go for dividend paying stocks, the income from which can be reinvested in other assets. Even though dividends are taxed at 10%, dividend below ₹10 lakh are not taxed. So high net worth investors can choose a hybrid option receiving dividends around ₹10 lakh and invest the remaining amount in stocks that provide them capital gains.

Top dividend yield funds have outperformed benchmark indices

Fund name	1 Year annualized return	2 Year annualized return	5 Year annualized return
Principal Dividend Yield Fund - Growth	21.01%	29.49%	23.27%
ICICI Prudential Dividend Yield Equity Fund - Gr.	13.56%	26.93%	-
Tata Dividend Yield Fund - Appreciation	5.93%	17.51%	22.61%
BNP Paribas Dividend Yield Fund - Growth	12.01%	20.22%	26.80%

Sensex	-3.20%	11.30%	15.91%

* mutual fund data as on 28th march 2018

Mature Companies Tend To Have Higher Dividend Payouts

"The amount of dividend a company pays depends on the business stage of the company. During initial phase (growth phase), companies tend to have negative cash flows from operations, thereby limiting their ability to pay dividends. Mature companies have high cash flows and tend to give out high dividends to keep their investors happy. Adding to the above factors, the non-availability of profitable reinvestment opportunities can compel companies to distribute excess cash in the form of dividends. This can be judged by the amount a company spends in its capital expenditure and working capital requirements. Low capital expenditure and working capital requirements leave companies with higher net incomes, thereby increasing the amount they can distribute as dividends."

than EPS growth is 20 per cent. Out of these 192 companies, there are 158 companies that delivered positive annualised returns and there are at least 97 companies that have given returns above 16 per cent on an annualised basis. The BSE Sensex in a similar time frame has delivered 16 per cent. Thus, we can say that almost 50 per cent of those companies within BSE 500 index that have reflected higher DPS growth over EPS growth in previous five years have managed to beat Sensex returns .

For those set of companies that have reflected higher EPS growth as compared to DPS growth over the past five years within the BSE 500 constituents, the observations are interesting and point towards outperformance.

Out of the total 500 stocks, we find that there are 214 stocks that have delivered EPS growth higher than DPS growth over the five-year period and the average return for these stocks is nearly 32 per cent on an annualised basis. Out of these 214 stocks, there were 200 stocks that managed to deliver positive annualised returns even as the number of such stocks that managed to beat Sensex stood at 152. We can say that almost 71 per cent of those stocks that are constituents of BSE 500 and have delivered higher EPS growth than DPS growth have managed to beat Sensex returns over the five-year period.

So, it can be said that companies that have higher EPS growth than DPS growth have a higher probability of outperforming benchmark indices. This is evident from the fact that companies which distribute lower dividends invest their retained earnings in more profitable venture, thereby increasing the firm's value and share price.

High dividend does not always mean good stocks

While choosing high dividend yield stocks, it is common for investors to give higher preference for those stocks that distribute higher dividends. One must ignore those companies for investments that have declared negative income or losses and are distributing dividends. There are several companies that have paid dividend to their shareholders even after having a negative PAT. Investors should be cautious about such companies as these dividend payments could be one-time event and do not ensure future income through dividends. Some of the examples of such companies last year are State Bank of India, Kirloskar Brothers Ltd, Bal Pharma Ltd, Tata Power Company Ltd and Tata Communications Ltd.

Conclusion

While it is advisable to look positively at high dividend-paying stocks, the process of identifying dividend-paying stocks is more important and will often determine the outcome. It is recommended that investors focus on those dividend-paying companies that have shown a steady EPS growth over the last five year period or more and are distributing dividends consistently even while reflecting growth in dividends, albeit less than EPS growth. The chances of such stocks outperforming the benchmark returns is very high and the beauty of including such stocks in your portfolio is attaining a blend of capital growth and dividend yield, which is a rare combination.

While constructing a portfolio around dividend-yield stocks, investors can also focus on those stocks that have more than 50 per cent promoter shareholding. The fundamentally sound stocks with promoter shareholding of more than 50 per cent may provide ample opportunity to identify high quality dividend-yielding stock that can generate alpha returns.

These are the two high dividend paying stocks that can be a part of your portfolio

SJVN

CMP : ₹34.30

BSE CODE : 533206

Face Value : ₹10

BSE Volume : 36,529

Sutlej Jal Vidyut Nigam (SJVN), a mini Navratna Public undertaking, is a joint venture between Government of India and Government of Himachal Pradesh. Besides executing projects in Himachal Pradesh, SJVN is presently executing projects in Nepal, Bhutan, Uttarakhand, Bihar and Gujarat. The company has already diversified into wind power, thermal power and power transmission.

During FY18, the company exceeded the Ministry of Power's target for the company to generate 8,950 million units of electricity by generating about 9015 million units. On the financial front, the company reported de-growth in revenue for Q3FY18. The company's revenue fell by 11.9 per cent YoY to ₹436.6 crore. The EBITDA for the quarter decreased 22 per cent YoY to ₹299.6 crore, whereas its EBIDTA margin fell by 896 bps YoY to 68.6 per cent. The company's net profit decreased 21.2 per cent YoY to ₹205.7 crore for the quarter under consideration. The gross power generation for the quarter stood at 1,280.8 million units for hydro power, 4.53 million units for wind power and 2.14 million units for solar power.

The company recently laid the foundation stone for its 60-MW Naitwar Mori hydro project which has the potential to generate 265.5 million units of electricity per year. In addition to this, by April-end, the company is going to start the construction of 900 MW Arun III hydropower project in Nepal to expand its capacity. SJVN is currently trading at a PE multiple of 9.59x. The company has a debt-to-equity ratio of 0.21x. The stock is trading at 1.05 times its book value. SJVN is providing a good dividend yield of 8.64 per cent and has also been maintaining a healthy dividend payout of 43.80 per cent. We recommend a **BUY** on the stock.

MOIL

CMP : ₹211.15

BSE CODE : 533286

Face Value : ₹10

BSE Volume : 20,828

MOIL, a mini Ratna company, is the country's largest producer of manganese ore, accounting for about 50 per cent of the India's total output. The mines of the company are strategically located, providing a competitive advantage to the company. Currently, MOIL operates 10 mines, of which six are in Maharashtra and four are in Madhya Pradesh.

The company registered a revenue of over ₹1,300 crore for FY18, representing a rise of about 31 per cent YoY. This is the highest-ever revenue in the company's history. The company has also reported production of about 1.2 million tonnes of manganese ore, its highest in the last 10 years. The company also recorded its highest-ever production and sales of non-fines manganese ore during FY18.

In Q3FY18, the company reported 15.62 per cent decrease in net sales to ₹299.8 crore, as compared to ₹355.3 crore during the same period last year. The company's PBDT remained flat at ₹170.28 crore in Q3FY18. The company has posted 2.34 per cent increase in its net profit to ₹103.79 crore in Q3FY18 as against ₹101.42 crore in Q3FY17. The company has set a production target of 2 MT by FY21 and 2.5 MT by FY25. The company is undertaking various mine development and expansion projects at Balaghat and Gumgaon mines for a total capex of about ₹460 crore. The company is also setting up ferro alloy plants with a total capacity of 75,000 MT at Balaghat and Gumgaon mines with a total investment of about ₹419 crore. MOIL has a PE ratio of 12.88x. The company is virtually debt-free with almost no long-term loans on its balance sheet. The company has been maintaining a healthy dividend payout of 41.17 per cent. We recommend our reader-investors to **BUY** the stock.

Updated Information

Subscribers can access the complete databank consisting of more than 3500 companies on our website **www.DSIJ.in**

- **Face Value:** Actual cost of the stock assigned by the security issuer and shown in the certificate.
- **Year:** First two digits shows Year while last two digits show month of calender, eg. 1103 shows March'2011 results.
- **CEqt.:** Current paid up capital of the company.
- **B.V:** Book Value Per Share: Equity capital plus reserves to the number of equity shares.
- **Sales:** Sales figures includes Excise duty.
- **NP: Net Profit :** Profit after tax but before investment allowance reserves.
- **EPS:** Earnings Per Share: Ratio of net profit less preference dividend to the number of equity shares (Annualised).
- **Div (Rs.):** Indicates the dividend per share.
- **D/E Ratio :** A measure of a company's financial leverage calculated by dividing its total Debt by stockholders' equity.
- **RONW (%):** Net Profit Divided by Total NetWorth.
- **Latest Quarter:** Indicates the recent quarterly filing of the company with the stock exchange.
- **YearToDate :** Latest Results (qtr,half or Nine) of the company.
- **Sales Growth % :** Indicates the % growth of sales on year-on-year basis.
- **NP Growth % :** Indicates the % growth of Net profit (NP) on year-on-yearbasis.
- **Promoter Holding:** Indicates the % of equity holding with the promoters of the company.
- **Promoters pledged shares %** :Indicates the % of shares Pledged by promoters. Institutional Holding: Indicates the % of equity holdings in the company held by Financial Institutions, Banks,Insurance companies,MF's and FIIs.
- **NoShold:** Indicates the Number of Share Holders of the company. (In Thousands)
- **Market Cap:** Current market price multiply no.of equity shares.
- **Price:** Current Market Price.
- **52 Week H/L:** High/Low range is taken for the market prices during the 52 week H/L.
- **Enterprise Value :** Current Market Cap Plus Debt Minus Cash and Bank Balances.
- **Trail.P/E Ratio:** Current market price to Trailing 12 months EPS.
- **Ticker:** BSE Scrip Code
- **U:** Unaudited.
- Companies with an (") following their equity capital have increased their capital after the last financial year.
- Companies with an (*) Before the name of the Company, indicates new addition/ updation/correction made during the fortnight.
- CB: Cum-Bonus XB: Ex-Bonus.
- EX: Ex-Rights wherever the price is indicated a Ex-bonus or Ex-rights, the corresponding figures for equity. Reserves, Book value and EPS are adjusted as per the bonus or the Rights ratio.

Notes: (A) The Profit figure reflects the performance of the current year. We have made the necessary adjustments for the prior year's entries in P/L .A/c to reflect the true performance of the current year. Thus our figures may not be comparable with those published elsewhere unless they represent the same thing. (B) Source of information is Company press releases and Annual Reports.

TOURISM & HOSPITALITY SECTOR: TAKING INDIA TO THE WORLD

India's Tourism sector, full of uncharted territories, is taking giant strides of growth. Nikita Singh explores where the sector is headed and what does it have in store for the investors.

Bustling with the diversity of breathtaking landscapes and traversing from the mighty Himalayas, the tourist trails in India lead from the oceanic havens of western coasts and the southern backwaters to the historical cities of Rajasthan. From the unabashed celebration of love in Khajuraho to the intensity of ancient faith in Varanasi, the trails meander into other places of vibrant colours and rich cultural heritage. India 's tourism industry and hospitality sector contributes over 9.6 per cent to the country's GDP, generating revenues worth ₹14.1 trillion in 2016 and making India the seventh largest tourism economy in the world.

Flagged as a largely 'luxury' sector, tourism has been generating tremendous employment opportunities both in the organised as well as unorganised sector. In the year 2016, the sector generated over 40 million jobs and posted the second largest tourism generated employment opportunities in our country as compared with other countries in the world. The sector accounts for over 9.3 per cent of the total jobs in the country. Expected to record a CAGR of 14.05 per cent by 2027, presently India is one of the fastest growing G20 countries on the tourism front. However, most of the growth in the Indian tourism sector is

primarily attributed to the tremendous increase in domestic tourists and travellers rather than the footfalls of foreign visitors. About 88 per cent of the sector's contribution to the country's GDP is credited to the revenues generated by the domestic travellers.

Majorly driven by the rapid urbanisation and breeding of the travel-touring culture in the multinational company offices, the tourism sector of India is most likely to witness exponential growth as a result of the demographic dividend. With over 50 per cent of the country's population under the age of 25 by 2020, the country is likely to be brimming with young and enthusiastic travellers deriving travel inspirations from the social media platforms. The growth story of the domestic travel industry extensively spins around the increase in consumption of the income-earning youth, which is likely to go up further with the increasing GDP and per capita incomes. The aviation sector, which is placed at the centre of the growing tourism industry is also playing a tremendous role in making the erstwhile difficult and exotic locations of the Indian travel panorama more accessible and more affordable.

The benefits of the rapidly growing aviation industry in the country is only set to multiply with the aviation companies increasing their fleet sizes and connectivity and the government implementing affordable flying with schemes like UDAAN. The other initiatives taken by the government to boost tourism, such as Swadesh Darshan and The National Mission for Pilgrimage Rejuvenation and Spiritual Augmentation Drive PRASAD), launching of a mobile application for tourists and introduction of an Incredible India Tourist Helpline, has brought notable traction in the sector.

While the the foreign visitors only contribute roughly 12 per cent to the country's tourism revenues, the footfall of foreign visitors has been steadily increasing in India in the recent years. The revenues from foreign tourists

Peter Kerkar

Group CEO, Cox & Kings Ltd

"The outlook for global travel and tourism is quite positive, even more so for India"

What has been your growth trajectory over the last decade?

We have different businesses, including Leisure India, Leisure International, Education and Hybrid hotels. We are leaders in our chosen businesses. Each business has its own dynamics and growth trajectory depending on the industry. In the last five years, our Leisure India business has recorded a CAGR of 14% CAGR, despite competition from and significant cash burn by online operators due to our focus on delivering value to our customers, rather than just offering cheap travel options. Education business, which provides experiential learning to school students in the UK, France and Australia, has grown faster than industry at 5% during FY13-18 due to our focus on providing safe, secure and top quality infrastructure including training staff. Hybrid hotels, which operate under the brand name Meininger with 19 hotels across 12 cities in Europe, has grown at 14% CAGR in local currency terms over the last five years, but is at the cusp of experiencing explosive growth. Leisure international business has been impacted by Brexit and depreciation of the British pound, although the business in Dubai has been growing strongly.

What is the expected growth rate of the company for FY19?

We don't issue a formal guidance. But there are forecasts available which peg the Leisure India industry growth rate at 10-12%. Globally, the trend of spending on experiences and the urge to go on vacations is increasing and India is no exception. In the past, due to our differentiated strategy, we have grown faster than or at par with the industry. Being the leader, we expect to maintain our relative position in the industry. The education travel business is a relatively stable business with the market growing at 1-2% p.a. but we are gaining market share and hence the long-term historical growth rates will likely sustain. In Meininger, we are challenging the dominance of large hotels and gaining significant market share as our hotels offer clean, safe and functional space for travellers at affordable prices. We have announced that we will increase our bed capacity by 50% in FY19, hence the growth will be robust. Overall, the outlook is quite positive for global travel and tourism and even more so for India.

What are the company's plans for expansion in the hybrid hotel segment?

Our hybrid hotel business operating under the Meininger brand is seeing hectic expansion. We have been expanding our network to various cities across Europe and will continue to widen our presence. From having 7,000 beds in December 2016, we have expanded to over 10,000 beds currently, a near 50% increase. Since we follow an asset-light model, the business is highly scalable. Encouraged by the success of our strategy, we are undertaking a further 50% increase in bed capacity in FY19 and will exit the year with 15,000 beds. With a significantly large pipeline of hotels being evaluated, we expect to increase our bed capacity to 25,000 by FY22. Given the wide acceptability of the concept of sharing in Europe, we believe the potential for Meininger is significant and the outlook is extremely positive.

amounting to ₹1.5 trillion in 2016 make up about 5.4 per cent of the country's total exports against a global average of 6.6 per cent. The 9 million aggregate international arrivals in India in 2016 account for a tenth of the foreign arrivals in countries such as France. Currently at the 40th position in the global ranking for foreign visitors, India is buckling up to tap its explored potential and registering a handsome growth in the number of foreign visitors in India in recent times. With increasing popularity of e-visa facility, the country recorded an influx of 15 per cent in foreign tourist arrivals at 56.74 lakh between January 2017 to July 2017, as compared to 49.03 lakh in the same period in 2016.

While the highest number of foreign visitors arrived from Bangladesh, the US and the UK were far behind, followed by tourists from France. Foreign tourists availing the facility of e-visa recorded a significant increase of over 73.3 per cent to 1.19 lakh tourists in July 2017 as compared to same month in the previous year. The government initiative to liberalise the country's visa regime through e-visa with 161 countries under this scheme is set to give a further boost to arrival of foreign tourists in the country.

Furthermore, the development of tourists circuits, greater connectivity of tourist havens through domestic flights, building of highways and higher railway connectivity is likely to provide more foreign tourists an impetus to travel in India. The promotion of homestays and affordable accommodation by the tourism ministry will further add to the travel motivations of the foreign tourists. By 2027, the influx of foreign tourists is likely to witness a hike of 6.1 per cent per annum, according to the report of the World Travel & Tourism Council. A greater number of foreign visitors are also being lured by the increasing promotion of the Government of India as a convenient, affordable and proficient health care destination. Reckoned as one of the fastest growing medical tourism destinations in Asia, the medical tourism sector of India, estimated to be worth USD 3 billion, is expected to reach USD 9 billion by 2020.

In the wake of such growth prospects, the performance of stocks related to Indian tourism sector has been gradually enhancing every year. The sector, with an aggregate one-year return of 23.35 per cent, has largely outperformed S&P BSE Sensex in equity returns for the past one year. The sector boasts of an EPS growth of 33.09 per cent on a year-on-year basis and has multi-bagger stocks including Asian Hotels (North) and Kamat Hotels (India). While Asian Hotels (North) has recorded a growth of 192.78 per cent in its stock price, Kamat Hotels recorded an increase of 157.23 per cent in its share price. Among the other top tourism sector companies, Royal Orchid Hotels recorded 75.3 per cent returns, Sayaji Hotels 67.79 per cent returns and Transcorp International recorded 45.75 per cent returns in the past one year. However, companies such as Graviss Hospitality, Viceroy Hotels, CHL and TGB Banquets and Hotels witnessed a decline of over 30 per cent in their share prices during the past one year.

The sector, presently delivering an average RoCE of 7.98 per cent, is set to soar in the markets in the coming times on the back of potential growth opportunities and an ever-increasing demand. The government's thrust on infrastructure development in general and tourism in particular is likely to benefit the tourism stocks in the long term. The wide expanse of untapped opportunities in the segment places the tourism sector heavyweights in a sweet spot to chart an exponential growth in the coming years. While convenient visa procedures, increased safety for foreign travellers and growth in amenities is set to bring in more foreign footfalls, the Indian tourism sector is on the cusp of unbridled growth waiting to be unleashed by the young and travel-enthusiastic domestic crowd.

Soumen Chatterjee

Director, Guiness Securities

According to World Travel and Tourism Council, India is expected to move up five spots to be ranked among the top five business travel market globally by 2030, as business travel spending in the country is expected to treble by 2030 from US$ 30 billion in 2015.

International hotel chains are likely to increase their expansion and investment plans in India and are expected to account for 50 per cent share in the Indian hospitality industry by 2022, from the current 43 per cent.

India's travel and tourism industry has huge growth potential. The tourism ministry is also looking forward to the expansion of e-visa scheme, which is expected to double the tourist inflow to India. India's travel and tourism industry has the potential to expand further on the back of higher budgetary allocation and low cost healthcare facility, according to a study conducted by Assocham India.

The tourism and hospitality sector is among the top 10 sectors in India to attract the highest foreign direct investment (FDI). During the period April 2000-June 2017, the hotel and tourism sector attracted around US$ 10.48 billion of FDI, according to the data released by Department of Industrial Policy and Promotion (DIPP).

We believe, the biggest beneficiary of the growth in tourism industry will be the aviation sector. Among the aviation stocks, Indigo is the frontrunner in terms of connectivity and occupancy rates. Despite the issues hovering around engine failures, which are surely going to be resolved pretty soon, Indigo is going to reflect stellar growth. The management is quite upbeat on tackling the issues and resolving them at the earliest.

EIH Ltd

CMP : ₹168.50

BSE CODE : 500840

Face Value : ₹2

BSE Volume : 9974

EIH Ltd is a flagship company of the Oberoi Group, which is one of the largest hospitality groups in India. The company, together with its subsidiaries, is engaged in the ownership, management and operation of five star deluxe and five star properties in metropolitan and tourist destinations in India and in select tourist locations abroad. In addition to this, the company also provides flight and airport services, car rentals and air charter services.

In the December quarter of FY18, EIH's revenue came in at ₹362.07 crore, witnessing a marginal increase by 0.4 per cent YoY. The operating profit stood at ₹83.91 crore for the December quarter, declining by 9.7 per cent YoY. The EBITDA margin contracted by 258 bps YoY to 23.2 per cent in the third quarter of FY18. The net profit after tax came in at ₹42.65 crore, witnessing a decrease of 24 per cent YoY.

On an annual basis, the company posted a 10.70 per cent decrease in its revenue to ₹1277.55 crore in FY17 from ₹1430.65 crore in FY16. The company's PBDT decreased by about 12.18 per cent to ₹238.34 crore in FY17, as against a PBDT of ₹271.41 crore in FY16. The profit after tax of the company declined by about 4.87 per cent to ₹96.53 crore in FY17 as compared to ₹101.47 crore in FY16.

The GST Council revised the rates for luxury hotels to 12 per cent and 18 per cent, depending on the tariff slabs, from earlier 28 per cent. The revised rates would tone down the tax burden on the company to manageable levels and improve profitability.

On the valuation front, EIH is trading at a PE multiple of 85.57x as against its peer Indian Hotels (254.36x). The company's return on equity (RoE) and return on capital employed (RoCE) stood at 4.76 per cent and 2.78 per cent, respectively. The company is virtually debt-free and has been maintaining a healthy dividend payout of 58.63 per cent.

The Oberoi, New Delhi, that was originally scheduled to reopen in April 2018, started the commercial operations ahead of schedule in January 2018. This would help the company generate revenues at par with earlier levels and contribute more than 14 per cent share towards revenue.

Also, over the next 2 to 3 years, the company plans to open some new hotels consisting of about 900 rooms. These hotels would be situated across various locations in India, Morocco, Kenya and Qatar. All these hotels are currently under construction and are expected to start operations within the next 2-3 years. The company did not raise any additional debt for the expansion and is managing well through its working capital. Consequently, the finance costs and its debt-to-equity ratio will stay unaffected.

The above factors, along with the boom in tourism in India, would trigger the company's topline growth going forward. We recommend a **BUY** on the stock.

STATE BANK OF INDIA

I have 1000 shares of State Bank of India bought at an average price of Rs 268. Should I hold the stock from a long term perspective?

- Vallalar

HOLD

BSE/NSE Code	500112 / SBIN
Face Value	₹1
CMP	₹263.25
52-Week	High ₹351.50 / Low ₹232.50
Your Current Profit/(Loss)	(1.77 per cent)

State Bank of India is India's largest commercial bank. The state-owned bank has the world's largest branch network with over 13,500 branch offices across India.

The bank has a strong presence across the world and has seven international subsidiaries in the US, Canada, Nepal, Bhutan, Nigeria, Mauritius and the UK. It also has over 50 branch offices in over 30 countries across the world. The principal subsidiaries of the bank include Bank of Bhutan, Indo-Nigeria Merchant Bank, Nepal SBI Bank, SBI (USA), SBI (Canada), SBI Capital Markets, SBI Cards & Payments and SBI European Bank plc, among others.

On the financial front, State Bank of India posted a 24.76 per cent increase in its interest earned to ₹54,802.89 crore in the third quarter of FY18 as compared to ₹43,925.59 crore in the same quarter of the previous fiscal.

However, the operating profit of the bank declined by 6.29 per cent to ₹11,754.57 crore in the third quarter of FY18 as compared to ₹12,543.26 crore in the same quarter of the previous fiscal. The profit after tax of the bank also declined by over 192 per cent to ₹2,416.37 crore in the third quarter of FY18 as compared to ₹2,610 crore in the same quarter of the previous fiscal.

On the annual front, the bank's interest earned increased by 7.02 per cent to ₹1,75,518.24 crore in FY17 as compared to ₹1,63,998.30 crore in FY16. The operating profit of the company increased by 17.55 per cent to ₹50,847.90 crore in FY17 as compared to ₹43,257.81 crore in FY16.

The net profit of the company increased by 5.36 to ₹10,484.10 crore in FY17 on a year-on-year basis. The bank is likely to witness a lot of headwinds in the short term due to asset quality and high provisioning issues. However, we recommend the reader-investors to **HOLD** the stock for the long term

SUNIL HITECH ENGINEERS

Should I buy Sunil Hitech at the current price for the year 2018?

- Akshat Solanki

BUY

BSE/NSE Code	532711 / SUNILHITEC
Face Value	₹10
CMP	₹7.87
52-Week	High ₹16.24 /Low ₹7.11
Your Current Profit/(Loss)	--

Sunil Hitech Engineers Limited is engaged in the business of engineering, procurement, construction (EPC), fabrication, erection, overhauling, maintenance, trading and other related activities. The company is engaged in construction of utility projects. Its segments include project, manufacturing, power and project supply. The project and related activities segment includes the business of fabrication, erection and commissioning of boilers electrostatic smoke precipitation (ESP), rotating machineries, sugar plants, transmission and distribution and EPC contract and balance of plant (BOP).

The manufacturing segment is engaged in manufacturing and supplying of Indian boiler regulations (IBR) and non-IBR piping, pressure parts and vessels, and technological structures. The power segment includes generating and distributing solar power in the state of Maharashtra. The project supply segment is engaged in supplying of electrodes, steel and other materials at various project sites.

On the financial front, the net sales of the company grew by 13.18 per cent to ₹600.93 crore in the third quarter of FY17 as against ₹530.93 crore in the same quarter of previous year. The company PBDT surged by 3.90 per cent to ₹30.36 crore in the third quarter of FY17 on a yearly basis The company's net profit increased by 8.57 per cent to ₹14.19 crore in the third quarter of FY17, as against ₹13.07 crore in the same quarter of previous year.

On the annual front, the net sales of the company increased by 14.43 per cent to ₹2,091.19 crore in FY17, as against ₹1,827.52 crore in the FY16 on a year-on-year basis. The company's PBDT declined by 10.20 per cent to ₹95.32 crore in FY17 as against ₹105.04 crore in FY16. The net profit declined by 20.06 per cent to ₹40.07 crore in FY17 as against ₹48.11 crore in FY16. Considering the company's future prospects, we will recommend **BUY** on the stock

SUNDARAM-CLAYTON LIMITED

I had bought Sundaram Clayton at Rs 5700. Should I buy more at the current market price? I have a time frame of 6-12 months. What should I do?

- Nilu Bajoria

HOLD

BSE/NSE Code	520056 / SUNCLAYLTD
Face Value	₹5
CMP	₹4944

Your Current Profit/(Loss)	(13.26 per cent)

Sundaram-Clayton Limited is a member of TVS group and one of India's largest automotive companies engaged in the manufacture and distribution of aluminium alloy cast articles, including parts and components. The company manufactures parts and accessories for motor vehicles, such as brakes, gearboxes, axles, suspension shock absorbers, radiators, clutches, steering wheels, steering columns and steering boxes, among others. Its segments include automotive components, motor vehicles and others. It manufactures aluminium pressure die castings for heavy commercial vehicles, passenger cars and two-wheelers. Its product range includes gear housing, filter heads, air connectors, filtration module casting, turbo charger and charge air pipe for the truck segment; cylinder head, case transaxle assembly, oil pan, chain case, cylinder head cover, adaptor oil filter, fuel pump housing, fork gear shift and starter housing for passenger cars, and crank case, cylinder barrel, wheel hub for powered two-wheelers and brake equipment valve bodies

On the financial front, the net sales of the company grew by 24.97 per cent to ₹404.53 crore in the third quarter of FY18, as against ₹323.69 crore in the same quarter of previous year. The company's PBDIT has declined by 97.98 per cent to ₹0.97 crore in the third quarter of FY18 on a yearly basis. The company's net profit declined by 109.29 per cent to ₹-45.08 crore in the third quarter of FY18, as against ₹21.54 crore in the same quarter of the previous year, yet the company has managed to maintain its revenues from sales.

On the annual front, the net sales of the company increased by 1.83 per cent to ₹1,394.55 crore in FY17, as against ₹1,369.48 crore in FY16 on a year-on-year basis. The company's PBDIT declined by 24.44 per cent to ₹105.59 crores in FY17 as against ₹139.6 crores in FY16. The net profit slightly decreased by 8.68 per cent to ₹71.61 crore in the FY17 as against ₹78.42 crores in FY16. We recommend investors to BUY with a long term prospective and **HOLD** for the short term.

MEP INFRASTRUCTURE DEVELOPERS

I bought 200 shares of MEP Infra at Rs 101. Should I hold it or buy more to bring down the average cost or exit?

- Soumyen Mukherjee

HOLD

BSE/NSE Code	539126 / MEP
Face Value	₹10
CMP	₹78.10
52-Week	High ₹148 / Low ₹60.25
Your Current Profit/(Loss)	(22.67 per cent)

MEP Infrastructure Developers, the toll management company incorporated in 2002. is a small-cap company (having a market cap of ₹1278.61 crore) operating in the infrastructure segment. The company operates network of roads, highways, bridges and toll plazas. The company's services include toll management, which provides infrastructure management and toll collection, covering Mumbai entry points, as well as build-operate-transfer (BOT) project at Baramati with Road Infrastructure Development Company of Rajasthan (RIDCOR) in Rajasthan and with National Highways Authority of India (NHAI) across the country, and operation and maintenance of roads and highways. Its security components include real-time surveillance, automatic vehicle identification based on sensors and laser-based toll audit systems. The company's projects include Hyderabad-Bangalore Highway, IRDP Solapur, Kini-Tasawade Toll Plazas and Phalodi-Ramji, among others. The company operates 47 toll plazas across nine states and has completed 73 projects with approximately 131 toll plazas and 825 lanes across 12 states in India.

On the financial front, the net sales of the company grew by 355.13 per cent to ₹531.18 crore in the third quarter of FY17, as against ₹116.71 crore in the same quarter of the previous year. The company PBDT declined by 117.62 per cent to ₹53.63 crore in the third quarter of FY17 on a yearly basis. The company's net profit increased by 450.25 per cent to ₹10.84 crore in the third quarter of FY17, as against ₹1.97 crores in the same quarter of the previous year.

On the annual front, the net sales of the company increased by 12.30 per cent to ₹780.84 crore in FY17, as against ₹695.33 crore in the FY16 on a year-on-year basis. The company's PBDT grew by 1281.18 per cent to ₹585.76 crore in FY17 as against ₹42.41 crore in FY16. The net profit declined by 51.24 per cent to ₹17.68 crore in FY17 as against ₹26.74 crore in FY16. Hence, looking at the growth drivers of the company, we recommend **HOLD** on the stock.

(Closing price as on Apr 10, 2018)

Reviews

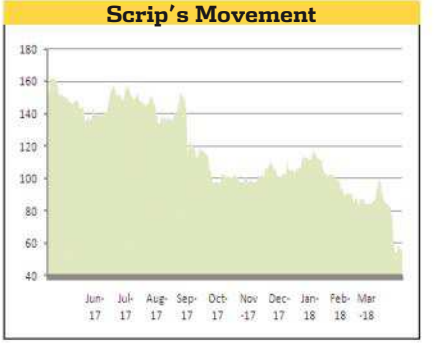
In this edition, we have reviewed **Kwality** and **TPL Plastech.** We suggest our reader-investors to **EXIT** in Kwality and **Hold** TPL Plastech .

KWALITY	EXIT	Change 65 Per Cent	CMP - ₹55.40
BSE CODE 531882	Reco. Price ₹162		Face Value ₹1

We had recommended Kwality in volume 32, issue no. 10, dated April 17- April 30, 2017, under the 'Special Report' section when the scrip was trading at ₹162. Our recommendation was based on its diversified portfolio, expansion of production capacity and robust earnings visibility. Kwality Limited is engaged in the business of processing, manufacturing and trading of milk, milk products and dairy products. The company provides products such as ghee, including pure ghee, pure cow ghee and low cholesterol ghee; butter; milk powder, including whole milk powder and skimmed milk powder; dairy whitener; milk, including full cream milk, toned milk and double toned milk, and curd. Its product portfolio also includes flavoured milk, sweet lassi, paneer, butter milk, dairy creamer and cheese. The company offers milk in pouches, and curd in variants, such as regular, probiotic, meethi dahi, low fat, sugar lite and raita. The company primarily markets and sells its products under the brand, Dairy Best and has presence in over 30 countries.

On the financial front, the net sales of the company increased by 12 per cent to ₹1,773.27 crore in the third quarter of FY18 as compared to ₹1,583.02 crore in the third quarter of FY17. The PBIDT of the company rose by 18.42 per cent to ₹127.45 crore in the third quarter of FY18 as against ₹112.65 crore in the same quarter of the previous fiscal. However, the net profit of the company declined significantly by 53.56 per cent to ₹20.94 crore in the third quarter of FY18.
On the annual front, the company posted a 8.35 per cent increase in its net sales to

Scrip's Movement

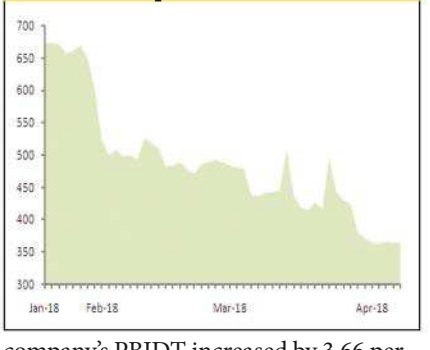


₹6,130.68 crore in FY17 as compared to ₹5,658.14 crore in the previous fiscal. The PBIDT of the company increased by 18.81 per cent to ₹412.02 crore in FY17 as compared to ₹346.78 crore in FY16. The net profit of the company increased by 22.05 per cent to ₹164.30 crore in FY17 as compared to ₹134.62 crore in FY16. After our recommendation, the share price of Kwality declined by around 65 per cent. The stock is not likely to witness any growth momentum in the near term. Hence, we recommend the reader-investors to **Exit** the stock.

TPL PLASTECH	HOLD	Change 43 Per Cent	CMP - ₹365
BSE CODE 526582	Reco. Price ₹691		Face Value ₹10

We had recommended TPL Plastech in volume 33, issue no. 4, dated January 22-February 4, 2018, under the 'Cover Story' section when the scrip was trading at Rs 691. Our recommendation was based on enterprising clientele, the government's increasing focus on infrastructure development and positive financial growth. TPL Plastech is a subsidiary of Time Technoplast. The company commenced operations in 1995 and has become the second largest manufacturer of drums, especially bulk packaging. TPL also manufactures polymer drums and pipes. The company has manufacturing facilities at five locations and currently it has a capacity of nearly 28,000 MT. The company employs over 280 personnel. The company has a huge clientele base catering to more than 225 customers in chemical and petrochemical industry. TPL's clients include Godrej Industries, Grasim, Gulf, Petrochem, L&T, Jubilant, Sanstar, UPL, Shapoorji Pallonji and NCC, among others. On the financial front, the company posted a 9 per cent increase in its net sales to Rs 46.97 crore in the third quarter of FY18 as compared to Rs 43.09 crore in the same quarter of the previous fiscal. The company's PBIDT increased by 9.97 per cent to Rs. 5.89 crore in the third quarter of FY18 as compared to Rs 5.35 crore in the same quarter of the previous fiscal. The net profit of the company increased by 7.27 per cent to Rs 2.68 crore in the third quarter of FY18 as against Rs 2.50 crore in the same quarter of FY17. On the annual front, the company's net sales increased by 1.11 per cent to Rs. 180.15 crore in FY17 on a year-on-year basis. The

Scrip's Movement



company's PBIDT increased by 3.66 per cent to Rs. 21.83 crore in FY17 on a year-on-year basis. The company's net profit increased by 31.32 per cent to Rs 11.28 crore in FY17 as compared to Rs. 8.59 crore in the previous fiscal. After our recommendation, the share price of TPL Plastech decreased by around 43 per cent. However, the stock is expected to stage a recovery in the near term, hence we recommend our reader-investors to **HOLD** the stock.

(Closing price as on Apr 09, 2018)

Kerbside

The recommendations provided in this column are taken from various market sources such as brokers, analysts, dealers and investment strategists, etc. These recommendations may not be backed by strong fundamentals. Therefore we advise readers to use their own discretion before investing in these recommendation

JUMP IN PROFITS

Shakti Pumps
BSE Code: 531431
CMP: ₹652

Shakti Pumps is a pioneer in the manufacture of energy-efficient stainless steel pumps and motors. Its state-of-the-art technology, high-tech processes and innovative designs have enabled the company to carve a niche for itself in the market. So far in the calendar year 2018, the stock has surged about 50 per cent. The company reported more than four-fold jump in its consolidated net profit at Rs 167 million in October-December quarter (Q3FY18). Its EBITDA margin improved to 21.17 per cent in Q3FY18 from 15.4% in Q3FY17. For the first nine months of the financial year 2017-18, the company's net profit more than doubled to Rs 245 million, as against Rs 107 million in the same period last fiscal. The stock has potential to rise further.

BPO OPERATIONS

Datamatics Global Services
BSE Code: 532528
CMP: ₹121

Datamatics is a global provider of information Technology, data management, business process management and consulting services to several Fortune 500 companies. The step-down subsidiary of the company has acquired 75 per cent stake in RJ Globus Solutions, a voice-based BPO company in Philippines, to strengthen its BPO offering to meet the growing demands of customers. This step will give the company opportunity to deepen its existing customer relationships and also build new ones. This big booster may push up its share price.

LOWER PRICING STRATEGY

ZEEL
BSE Code: 505537
CMP: ₹575

Zee Entertainment Enterprises operates through content and broadcasting segment. A couple of months back, the company unveiled a new Indian OTT platform, ZEE5, with a content library of 100,000 hours, including exclusive originals, movies, live TV and TV shows across 12 languages. Our sources believe ZEE5 has the ability to grab the attention of semi-urban/rural Hindi and regional viewers as it is a leading content provider and has a lower pricing strategy for its OTT platform. The stock looks eminently poised for a good upmove.

AND FINALLY..

L&T
BSE Code: 500510
CMP: ₹1,348.55

L&T is a major technology, engineering, construction, manufacturing and financial services conglomerate, with global operations. It addresses critical needs in key sectors, including infrastructure, construction, hydrocarbon, power, defence and aerospace. Its Q3 order inflow grew by 38 per cent on a YoY basis. This was partly on account of release of orders after GST settling in and it also saw momentum in tendering activity led by the B&F, roads and T&D, hydrocarbons, water and power generation segments. Looking at the huge order book and expecting new order inflows from the government as the latter is looking to spend on infrastructure. The stock could provide decent returns in the short-medium term.

DSIJ ANNOUNCES THE WINNERS OF

STOCK MARKET CHALLENGE 2

www.dsij.in/Game

QUARTER 1

Stock Market Challenge 2 (SMC 2) is a real-time trading game (or stock market simulation platform). DSIJ launched it in December 2016. SMC helps players to have experiential learning of economic and financial concepts of the stock market. It got very good response from stock market traders, investors, finance and business management students and housewives, too.

HERE'S THE SMC 2 – Q1 WINNER NO. 1.
THE CHANAKYA OF
STOCK MARKET CHALLENGE 2

HATS OFF TO YOU
SANJEET KUMAR GIRI!

21 years old, studying at IIT (BHU), Varanasi

Final Portfolio value earned by him is Rs. 1326274.67

Winning Strategy: There are many things one need to analyze before trading in shares/stocks. Most important of them are the balance sheets, cash flows, and the momentum of the market and the government policies being formed. I try to come to a decision of either buying or shorting any share/stock by analyzing on the basis all the pieces of information that I mentioned.

WINNER NO. 2
THE WIZARD OF STOCK MARKET CHALLENGE 2
CONGRATULATIONS
PIYUSH SHARMA !

20 years Old, Engineering student, Chandigarh

Final Portfolio value earned by him is Rs. 1285963.41

Winning Strategy: Follow the basic rules-Buy on highs and sell on dips, Focused on intraday trades and volume traded. Adopted a calculative approach on risk assessment and critical analysis of risk reward ratio.

WINNER NO. 2
THE WIZARD OF STOCK MARKET CHALLENGE 2
CONGRATULATIONS
AVINASH NIMESH !

21 years Old, studying at IIT (BHU), Bharatpur

Final Portfolio value earned by him is Rs. 1201643.97

Winning Strategy: I was going through the latest updates of stock market and was fully aware about trends in the market. I started off the competition with the companies having great track records. Once I started getting profits, it boosted my confidence and then I invested in small firms. Although my track was full of ups and down but I never took the loses upto my mind. Keeping faith in yourself is a key to success in financial stock markets.

Says Avinash "DSIJ provides a national platform to turn the theoretical knowledge of finance and risk management into practical usage. DSIJ prepares me to battle in real stock marketing ground and teaches me to take calculated risk while trading".

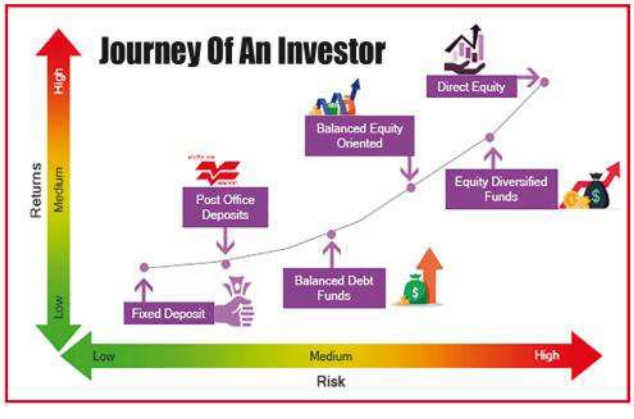
Mutual Funds Unlocked

Our journey over the last 32 years,–which started off with the humble beginning of a 12-page cyclostyled stapled booklet, has been nothing less than eventful. We saw the stockmarket evolve in front of us and we take pride in having played a role in the journey of financial growth of our country.

We are, once again, embarking on a new journey –with a mission to bring information on equity mutual funds to our readers. As investments by retail and HNI investors have gone up in mutual funds in recent years, it has become imperative for us to be in this space to serve the interest of our reader-investors. In addition, this was reinforced by suggestions we received from the audience during the large number of on-ground investor awareness programmes (IAP) we conducted.

The logical ascend (though not necessarily) for a new investor is to start with fixed deposits and gradually move towards investing in equity (see chart).



However, for us, it is an extension from 'direct equity' to 'equity diversified and balanced equity-oriented funds'.

Therefore, before adding the mutual fund content,we wanted to be sure that we offer something that is not run-of-the-mill but unique and, at the same time, useful for the investors. We did our own survey in terms of mutual fund products that are available now and what is required by an investor. Leveraging our legacy of 32 years of equity research, being our core competency, we developed a unique methodology that will help readers to identify the equity fund that is going to be the best performer in the next one year. We have used our research and unique methodology to come out with a Mutual Fund (MF) score. This MF score indicates the expected returns of the funds for next one year. We believe you can use this ranking system to deploy a portion of your funds in equity mutual funds that fit in to achieve your financial goals.

Why an equity investor should invest in equity mutual fund

Investing in equity mutual fund does not mean you should stop investing in equity. We believe both complement each other and you should consider investing a part in equity mutual fund as well. First, it helps you to diversify your portfolio at comparatively lower cost and that too instantly. It also saves you the hassle of tracking your holdings and any development thereof. For a few stocks, it is easy to track all the price sensitive information, however, once the portfolio of stocks crosses a certain number, it becomes difficult to keep track.

Hope you will enjoy reading and benefiting from our mutual fund discernment, the way you have benefited in equity investment by reading our magazine for past 32 years.

The Changing MF Landscape And Its Impact On You

The entire ecosystem of mutual fund industry is set to change impacting each stakeholder. DSIJ deep dives to find the reasons for such changes and what should you be doing with your mutual fund investments.

Change is painful, but if you do not change, it could prove disastrous, if not fatal. The current tectonic shift happening in mutual fund industry is similar in nature and is going to be discomforting for many of us, including fund houses and investors. Nevertheless, in the long run, it will be beneficial for all the stakeholders of mutual fund industry and will lead to healthy increase in the size of the industry. Traditionally, most of the mutual fund investors looked at the past returns of funds to decide on the right kind of fund to invest in. Nonetheless, some of the discerning investors also looked at the category return and then they compared the top-rated funds on some of their statistical parameters to arrive at the fund they want to invest in. All the performance measures and statistical parameters to assess the fund's 'investability' were calculated based on holdings of the funds and how they have performed in the past.

Nevertheless, soon many of the investors will find it hard to do their research as we may see a change in the name of the funds, change in the holdings of the funds, their mandates and even some of the funds might get merged with other funds or some will just fold up. The reason for all these possible changes is to comply with one of the circulars issued by market regulator SEBI in the month of October 2017. According to the circular, all the Asset Management Companies (AMCs) need to categorise their schemes into a specific definition (Please see box: ***The Reset Button for Mutual Fund Industry).***

Earlier, many of the AMCs, if not all, launched various funds that were similar in nature and construct in almost every aspect, but with different names. For example, a fund house would have more than one fund in its stable, which primarily invested in large-cap stocks with different names. Just to give you a perspective, we analysed the data at the end of March 2018 from one of the popular website on mutual fund and we found that some of the fund houses have more than 10 funds in the large-cap

category **(See Table: Top fund houses with number of funds in different category)**
Even in the case of mid-cap category, there are more than five funds. Kaustubh Belapurkar, Director, Fund Research, Morningstar Investment Adviser India, explains the reason behind such a move and how it is going to help industry.
"Prior to the categories being defined, each asset manager had their own category definitions, which resulted in varied fund mandates within the same category. For instance, managers had their own definitions for what constituted large, mid and small cap stocks. For example, one manager may define large-cap stocks as the top 100 stocks, while another may use a cut-off of, say, Rs 5 bn for large-cap stocks. Even categorisation of funds was

The Reset Button for Mutual Fund Industry

Categorisation and rationalisation of MF schemes by SEBI:
The SEBI's primarily motto behind this is to reduce the confusion of investors. So, it has come out with a solution with this circular under which it has ordered fund houses to maintain one scheme under each category, due to which AMCs will have to align their basket of existing funds according to new classification. Different schemes should be distinct in nature in terms of investment strategy and asset allocation. The broad classification of fund categories are given below.
■ Equity Schemes ■ Debt schemes ■ Hybrid Schemes
■ Solution-oriented schemes ■ Other schemes

SEBI has finalised the 11 major categories under the equity schemes. But a mutual fund house has to choose between value or contra scheme, so one fund house can opt for 10 schemes among 11 hybrid schemes

Large Cap Fund	Minimum investment in equity & equity related instruments of large cap companies - 80% of total assets
Mid Cap Fund	Minimum investment in equity & equity related instruments of mid cap companies - 65% of total assets
Small Cap Fund	Minimum investment in equity & equity related instruments of small cap companies - 65% of total assets
Large & Mid Cap Fund	Minimum investment in equity & equity related instruments of large cap and Mid cap companies - 35% each of total assets
Multi Cap Funds	Minimum investment in equity & equity related instruments-65% of total assets
Dividend Yield Fund	Scheme should predominantly invest in dividend yielding stocks. Minimum investment in equity - 65% of total assets
Focused Fund	Minimum investment in equity & equity related instruments - 65% of total assets and scheme will be of 30 stocks (maximum)
Sectoral/Thematic	Minimum 80% of total assets investment in equity & equity related instruments of a particular sector or thematic stocks
ELSS	Minimum 80% of total assets investment in equity & equity related instruments (in accordance with as notified by Ministry of Finance)
Value Fund**	Minimum investment 65% of total assets in equity & equity related instruments and Scheme should follow a value investment strategy
Contra Fund**	investment in equity & equity related instruments - 65% of total assets (Minimum)and Scheme should follow a contra investment strategy.

** Mutual Funds will be permitted to offer either Value fund or Contra fund

SEBI has finalised 7 categories under hybrid schemes. However, an AMC can only have 6 categories and it has to decide within balanced hybrid fund or aggressive hybrid fund. In the circular SEBI has put the arbitrage fund under the hybrid fund category.

Conservative Hybrid Fund	Investment in equity & equity related instruments - between 10%-25% of total assets; Investment in Debt instruments - 75%-90% of total assets
Balanced Hybrid Fund**	Investment in Equity & Equity related instruments - between 40%-60% of total assets; Debt instruments - between 40%-60% of total assets. And Arbitrage would not be permitted in this scheme
Aggressive Hybrid Fund**	Investment in Equity & Equity related instruments - between 65%- 80% of total assets; Debt instruments - between 20% - 35% of total assets. Most of the balanced funds will fall into this category.
Dynamic Asset Allocation or Balanced Advantage	Investment in equity/ debt that is managed dynamically. All famous balanced advantage or dynamic funds will fall into this category.
Multi-Asset Allocation	Invests in at least three asset classes with a minimum allocation of at least 10% each in all three asset classes. Foreign investment will be considered as a separate asset class.
Arbitrage Fund	Scheme following arbitrage strategy. Minimum investment in equity & equity related instruments - 65% of total assets
Equity Savings	Minimum investment in equity & equity related instruments - 65% of total assets and minimum investment in debt - 10% of total assets. Minimum hedged & unhedged to be stated in the SID. Asset Allocation under defensive considerations may also be stated in the Offer Document

** Mutual Funds will be permitted to offer either an Aggressive Hybrid fund or Balanced fund

Also, under solution-oriented schemes, debt schemes and other schemes, SEBI has mentioned norms regarding the investment strategies and lock-in periods.
Also, to simplify the schemes and to ensure uniformity in equity universe, SEBI has also announced the classification of stocks under the large-cap, mid-cap and small-cap stocks as per the market capitalisation. The classification is as follows:

Large-Cap- First 100 companies in terms of market capitalisation
Mid-cap- From 101st to 250th in terms of full market capitalisation
Small-cap- All companies from 251st company will be covered under small-cap category.

AMFI, the industry body, will update the list of stocks in large-cap, mid-cap and small-cap half yearly in June and December. The list will be provided five days before the end of the six-month period and funds will have a month's time to realign their portfolios

Invesco Mutual Fund

A fund that fits your growing needs

Invesco India Growth Fund

(An Open-ended Diversified Equity Scheme)

While you work hard to meet your growing needs, ensure that your investments work just as hard. Invest in a fund that helps you build a solid foundation for growth. RISKOMETER

Investors understand that their principal will be at moderately high risk

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

different for each fund house. For example, one fund house may define their large cap fund as a fund holding at least 90% in large-cap stocks, while another may define the same as at least 75% in large-cap stocks. This resulted in fairly different mandates within funds from the so-called 'similar fund' categories. This could potentially lead to having fairly divergent returns within categories primarily due to certain type of holdings doing better than the others".

Therefore, the scheme of a fund house may be true to level of their own definition of classification of stocks. But from other fund house's definition of stocks, the same fund might not be true to its level. There were more than 1,800 primary schemes offered by these AMCs earlier, including debt funds. Instead of giving them more option, this would create confusion amongst investors. Therefore, any comparison of category of funds across fund houses may not give a correct picture. The different definition and categorisation by the mutual fund houses was done to beat the category and benchmark returns. However, for an investor, it was creating difficulty in selecting the right kind of funds that suited his risk-return profile.

So, to clear this confusion and bring in more clarity and uniformity to the entire offerings of mutual fund houses, SEBI came out with the circular that will require all the fund houses to have only one scheme per category. Going one step ahead, SEBI has even defined the categories. It has broadly defined mutual funds schemes into five categories. They are equity, debt, hybrid, solution oriented and other schemes. Belapurkar further explains that with SEBI's re-categorisation exercise, there is a level playing field for all managers and funds will have uniform mandates within a category. Thus, going forward, it will be a true test of fund managers' skills and their alpha generation capability".

The entire process

To implement all these changes, all the fund houses were supposed to assess their offerings' and come out with their proposal on how they intend to comply with the new circular. Within two months of the circular, the fund houses had to submit their proposals to the regulator. After the submission, SEBI would give its nod to start the process of transition. Most of the fund houses, at least those with smaller assets under management, have already got the approval for their proposed changes. They need to complete the entire transition within three months. Before that, they need to inform the existing unitholders about the changes, alteration in the mandate of the fund they have invested in and give them the exit option without the exit load.

Where do we stand currently

The entire process of rationalisation and categorisation was supposed to rejig the mutual fund industry inside out, with repercussions that could be felt in the equity markets. According to a report by a large foreign brokerage firm, the entire process of realignment of funds with the objective of conforming to the SEBI circular would have led to buying of around Rs 19,000 crore in mid-cap stocks. The basis of this report was the holdings of the equity funds at the end of October 2017 and the assumption that the fund houses will stick to the current level of categorisation. For example, a fund with a mandate of investing in mid-cap funds would now stick to guidelines issued by SEBI and have to align its portfolio along with new market-cap defined by AMFI. Hence, if it is short of mid-cap stocks, the fund may have to buy and that will boost demand for the mid-cap stocks.

More than six months have elapsed since the circular was issued by SEBI. The mutual fund industry is coping up with the new directive. Only minor changes have occurred as only two per cent of the funds have undergone changes. However, most of these funds are from the debt category. The number of funds in the equity category has declined by six by the end of March 2018 and the irony is that it has gone up by 12 in case of the debt category. One of the reasons for such limited shake-up is due to the wide choices given by SEBI to change fund's mandate that would easily avoid any merger or liquidation of the funds. For example, if a fund house has more than three funds in large-cap category, it can keep one as a large-cap and can covert the other two into sectoral funds, depending on the portfolio of the scheme.

The recent changes are also a blessing in disguise for many small fund houses which did not have any funds in any particular category. Now, these fund houses can introduce funds into those categories and do not have to define the basket of stocks also. Everything is now laid down by SEBI.

What should you be doing

With all these changes, you might be worrying what will happen with your funds and, more importantly, what should be your strategy now. The analysis of all the approvals a fund house received from SEBI to realign its schemes to comply with its circular shows that no major change has been happening except for couple of funds. The current changes are not as drastic as was expected when the circular was issued. Belapurkar also shared his view on this and said "We do expect changes to happen in portfolios, but we don't think they will be drastic for all funds. Many funds will only need to make changes at the margin in their portfolios to align themselves with their new categories". He further elucidated, saying: "Overall, at an industry level, these changes will be carried out over the next three months, so the impact should be manageable."

Nevertheless, it will entail certain changes and, as an investor, you need to remain alert and informed about the changes. There are three things you should focus on, namely, your risk profile, return expectation and investment horizon. According to Belapurkar, "These factors decide the most suitable asset allocation for their portfolios." Therefore, even if your fund is changing its name or construct, it does not mean that you should exit the fund. You should assess your investment objective and see if the current change in the fund will help you to achieve your goals. If the changes are minor, then you can continue with the fund, otherwise you can exit and invest in a fund that suits your risk-return profile and meets your asset allocation requirements.

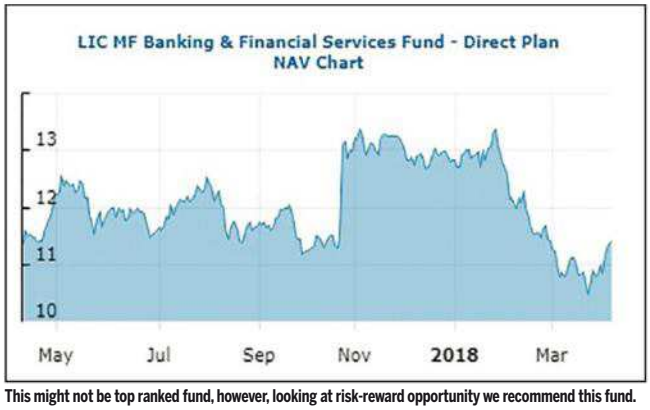
Reason for recommendation

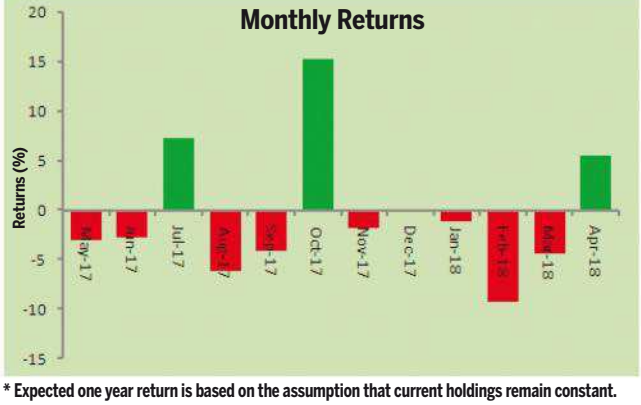
This is an open-ended equity fund, which invests majorly in equity and equity related securities of companies engaged in banking and financial services sector. The banking sector is going through lot of turmoil recently which might not be comforting for many investors. Nevertheless, if one looks with a long-term investment horizon, this sector is expected to give better returns to the investors. This fund has good mix of both public-sector banks, private sector banks and other financial services companies. The major holdings of the fund are in ICICI Bank and SBI. The former has already started unlocking its value in its subsidiaries while the later is also taking steps in the same direction. SBI is all set to leverage its reach and technology to improve its financial performance. In addition to this other major PSU bank, Bank of Baroda is also going to perform well as management has indicated its intention to grow profitably instead of just growing. Hence, we believe this fund is going to generate better returns compared to other funds. The fund is suitable for high risk investors.

Top 10 Holdings

Company Name	% of Net Assets
ICICI Bank Ltd.	8.85
State Bank of India	7.26
City Union Bank Ltd.	6.71
Bank of Baroda	6.15
Axis Bank Ltd.	5.49
Bank of India	5.22
Cholamandalam Investment & Finance Company Ltd.	5.06
Canara Bank	4.46
Punjab National Bank	4.45
The South Indian Bank Ltd.	4.44



This might not be top ranked fund, however, looking at risk-reward opportunity we recommend this fund.



* Expected one year return is based on the assumption that current holdings remain constant.

Fortune Securities, Siliguri

Reallocate Investments To Plan For Contingency And Retirement

Financial planning has picked-up pace in the past few years and even people from middle-class families in Tier-2 and Tier-3 cities have realized the importance of investment and financial planning. However, most financial planning in these small towns and cities are done based on suggestions from friends and relatives and less through a proper financial planning process. Moreover, these people fail to realize that proper financial planning is incomplete without retirement planning.

I meet a lot of clients every week and the most common thing that I notice among most of my clients in my area is that their idea of financial planning hovers around meeting children's education and marriage expenses. As most of my clients are from business background, they feel that things like contingency planning and retirement planning are only for salaried people.

They think that these are unwanted investments and will drain excess liquidity from their business and will hamper normal business proceedings. However, just by reallocating their current investment and savings they can even plan for contingencies and retirement.

Let me explain this with the help of a hypothetical case study. Mr. Goyal is a 38-year-old, married for the past 10 year and has a son, aged 8, and daughter, aged 5. He owns a business, dealing in readymade garments. He has inherited a family house, currently worth ₹2 crore. His business investment is worth ₹50 lakh (including stock-in-hand and receivables). His wife is a home maker.

Key Financials:

His current annual income after tax is ₹15.6 lakh, i.e., ₹1.3 lakh per month.

His monthly household expense is roughly ₹70,000 per month (i.e., ₹8.4 lakh per annum) including children's school expenses.

Travel and other healthcare expenses: ₹50,000 per annum

He invests ₹25,000 per month in SIP since last 5 years for his children (₹10,000 each for son and daughter's higher education and ₹5,000 for his daughter's marriage expenses)

- Current SIP investment value is ₹10 lakh each of SIP's for children's education and ₹5 lakh of SIP linked to daughter's marriage expenses

He has a family medical insurance for which he pays an annual premium of ₹20,000. He also has a life insurance plan of ₹25 lakh (started 3 years ago – policy term: 30 years) each in his and his wife's name for which he pays an annual premium of ₹150,000.

His cash and bank balance(including FD) as on date is Rs 15 lakh.
His annual savings is ₹2 lakh.

Goals:

Children Education:

1. Son's higher education: Fund requirement ₹40 lakh (as per current cost) when he attains the age of 18
2. Daughter's higher education: Fund requirement ₹25 lakh (as per current cost) when she attains the age of 18

Daughter's Marriage:

1. Fund requirement ₹40 lakh (as per current cost) when she attains the age of 25

Key Challenges:

- Mr. Goyal is unaware of the need for retirement planning
- Business income might not be the same every year
- He is not fully insured

Before approaching Mr. Goyal about the key challenges, let us check if his current investments will be able to meet his financial goals that he has prioritized.

Top Priority: Client's Financial Goals

	Goals		
	Son's Education	Daughter's Education	Daughter's Marriage
Current Value of SIP	₹10 Lakhs	₹10 Lakhs	₹5 Lakhs
SIP Amount Per month	₹10,000	₹10,000	₹5,000
Tenure (Years)	10	13	20
Future Expected SIP Value (@12% annualized return)	₹56.2 lakhs	₹84.8 lakhs	₹104.5 lakhs
Expected Cost (at current rate)	₹40 lakhs	₹25 lakhs	₹40 lakhs
Future cost (@6% Inflation)	₹73 lakhs	₹54.4 lakhs	₹132.4 lakhs
Expected (Shortfall) / Surplus	(₹16.8 lakhs)	₹30.4 lakhs	(₹27.9 lakhs)

The situation in which he is right now is quite common among most investors today. Mr. Goyal has made provisions for all three financial goal priorities, but he has failed to allocate the funds properly. While he will have surplus funds from his investment after meeting his daughter's education expenses, he will face a shortfall in meeting son's education expenses and daughter's marriage expenses.

Based on our calculations and analysis, Mr. Goyal will be able to achieve his financial goals just by reallocating his investments in a more goal-oriented manner:

Goals	Current Value of SIP	New SIP Amount (₹)	Future Expected SIP Value(@12% annualized return)	Future cost (@6% Inflation)
Son's Education	₹ 10 Lakhs	₹17,000	₹72.5 lakhs	₹73 lakhs
Daughter's Education	₹10 Lakhs	₹2,000	₹54.7 lakhs	₹54.4 lakhs
Daughter's Marriage	₹5 Lakhs	₹8,000	₹134.5 lakhs	₹132.4 lakhs

Just by tweaking his investment allocation, Mr. Goyal will be able to meet all his three financial goals. The total additional allocation that would be required is ₹2,000 per month (i.e., ₹24,000 per annum).

Priority 2: Protection

We have analyzed two major aspects: Mr. Goyal generates his income from business which can be highly volatile over the years and he is also not fully insured. To protect him from income fluctuations and to help him meet his financial goals, he should keep aside his current assets (cash, bank balance, and FD of ₹15 lakhs) for contingency purposes only.

As far as insurance is concerned, he must understand that insurance is a safeguard against a financial loss and not against an emotional loss. Life insurance should only cover the risk of life of the earning member of the family and the earning member should be fully covered. In case of any untoward event in the life of the earning member, the dependents should not suffer financial disability. In Mr. Goyal's case, his wife and both children are dependent on him.

So, he should take a life insurance cover of at least 10 years of his current family expenditure amount, that is, roughly ₹1 crore. The ₹1 crore policy should be a term plan as it would not be possible to pay a high premium of an endowment plan. The term plan's annual premium would be around ₹25,000 for ₹ 1 crore cover. He should discontinue the current life insurance cover that he has for himself and his wife.

Priority 3: Retirement Planning:

Most businessmen fail to realize the importance of retirement planning. While Mr. Goyal is well aware of financial planning and had somewhat set his financial goals and is investing for the same, yet he has failed to realize the importance of retirement planning. Businessmen think that retirement is only for salaried people, but is it possible for a businessman to run his business till his last breadth?

Moreover, with Indian family value system getting westernized, it is highly appropriate to go for a retirement planning.

Present Age	**38 years**
Retirement Age	**60 years**
Life expectancy	**80 years**
Current Monthly Household Expenditure	**₹70,000**
Time to retirement	**22 years**
Expected inflation per year	**6% p.a.**
Monthly Expenditure - at retirement age	**₹252,248**
Provision for travel, healthcare annual expenditure (per annum)	**₹50,000**
Travel, healthcare will inflate by	**10% p.a.**
Travel, healthcare at time of retirement (per annum)	**₹407,014**
Annual expenditure at retirement	**₹3,433,985**
Post retirement expected inflation	**6% p.a.**
Expected return on investment in pre-retirement period	**15% p.a.**
Expected return post retirement	**8% p.a.**
Corpus required at time of retirement	**₹56,768,876**
Investments at the time of retirement (Business investment to be utilized after retirement)	**₹5,000,000**
Additional Corpus Required	**₹51,768,876**
Per Month Investment Required	**₹25,000**

As per our calculation, he will require ₹5.7 crore at the time of retirement at the age of 60. This amount might sound huge, but if he starts investing now, he can achieve the same by investing just ₹ 25,000 per month (after utilizing ₹50 lakh business investment at retirement). We have assumed a pre-retirement period investment return of 15% as the investment will be made mostly in equity products. Post-retirement, his risk-taking ability will minimize so the retirement corpus will be switched to a debt fund that will give a moderate return of 8% per annum.

He can easily fund the monthly investment from his current savings and the money that he will save from switching his life insurance from endowment to term plan.

Disclaimer: The above case study is just to create awareness among investors about the importance of proper financial planning. The above case study should not be taken as a basis for making any financial investment decisions. Please contact your respective financial planner for your proper financial and investment planning.

What Is Your Choice?

VIP and SIP have their own advantages and disadvantages, but VIP scores over SIP when it comes to returns. However, VIP requires better liquidity and constant monitoring of fund's NAV to derive the advantage

One of the cardinal principles of investing is "Buy Low and Sell High". This helps investor to generate better returns. This is equally applicable for mutual fund investor who is always looking out for an opportunity to earn more. Nevertheless, one of the greatest impediments to following such a principle is volatility in the market. You never know when the market is at low and when is it at high. The movements in the prices of stocks held by mutual fund schemes are highly unpredictable, at least over the shorter duration, due to which the NAVs (Net Asset Values) of the schemes also fluctuate. So, in order to protect and grow their investments faster, investors have various options available for investments in mutual funds. In other words, investors look out for the best possible option to protect their investments which will help them invest at the right time and in the right way to earn best returns.

VIP vs SIP

One of the not-so-popular ways of investing is value averaging investment plan (VIP). The concept follows the conventional investment philosophy of buying at lows and selling at highs, or buying lesser at higher prices. In this method, the investor determines his goal, which is the final amount that he wants to reach at the end of the given period and invests accordingly with the market movement. VIP is more a formula-driven approach that forces you to buy higher at lower prices, while you may not buy at higher price at all.

VIP is very much different from SIP (Systematic Investment Plan), one of the most popular, highly publicised and widely used investment tool by mutual fund investors. This investment method is also known as rupee cost averaging method. Here, the investor invests a predefined amount every month, irrespective of market movement. Therefore, if the market is going down, he may be buying more units, but he may not be deploying higher amount.

Both these concepts score well in various market conditions and protect the investors from the risk associated with market volatility. Let's take an example. Suppose, if an investor wants to invest Rs 24,000 every year, he will invest it in a year by opting for an SIP of Rs 2000 per month. Accordingly, if the NAV of the scheme goes down, the investor will receive more units, and if the NAV goes up, then he will receive lesser number of units. Since the investor is buying every month, he will be buying at dips as well as rallies, so he is ultimately averaging his cost over the period.

However, the concept of VIP works backward as the value of investment changes for every month. Here, an investor decides the final amount of investment which he wants to accumulate and, accordingly, sets his goals for every month. So, when the NAV goes up, the investor needs to invest less and at lower levels he must invest more.

Let us take another example. Suppose an investor needs Rs 24,000 after one year and he needs to reach this amount systematically i.e. he will plot his investment over the period. So, the target for the total value of his investment in the second month would be Rs 4,000, Rs 10,000 in the 5th month, Rs 20,000 in the 10th month and so on, until he reaches Rs24,000 in the 12th month. With this plan, every month he will work on the value of units acquired in the last month and then he will invest an amount which will help him reach the desired value of investment for that month. So even if the investment is disciplined, the value or sum that he needs to invest keeps on changing according to the movement in scheme's NAV. Depending on the goal and the amount of investment you are making, you need to keep liquid cash so that you can reap the benefit of a dip in the market.

Example

To make it more illustrative, we have looked at how VIP and SIP work in a different market conditions. Let's assume the investment is done in one of the very popular mid-cap schemes in various market conditions.

In the above example, we have analysed both the investments in SIP and VIP while investing in the same fund in the same market conditions. In the bull market, an investor gets good returns in both the cases. In the case of SIP, the investor has invested Rs 2,000 every month. So, the total investment he made is of Rs 24,000 in a year. In the bull market, the SIP has reaped a return of 24%, which we have calculated using XIRR. That is, the investor has earned a profit of ~Rs 2996 by way of increase in the value of investment.

Similarly, while adopting VIP as an investment tool, in the same condition with a goal of reaching Rs 24,000 by the end of the year, the investor invested only ~Rs 20,357. This has helped the investor earned a profit of Rs 3,642and its XIRR comes at 25%. So, in a bull market, an investor can earn more by investing lesser amount through the VIP. Similarly, in a trending and down market where the market volatility is much higher, the losses remain more capped in the VIP than in the SIP.

Both SIP and VIP protect during market volatility, but if we

			XIRR	25%					XIRR	-4%							XIRR	-17%		

observe the end result of these investment plans, VIP gives an edge with a higher annualised return of 1% in all the three types of market. With the power of compounding, this 1% is expected to give much higher returns in the longer run. So, in the case of return yield, VIP scores over SIP. However, with VIP, the investor needs to watch the market continuously as he has to adjust the investment every month, which is a tedious job. It may create some issues of cash flows if he is having limited financial resources.

Though the VIP reaps more returns than the SIP, the SIP is still a good investment strategy for investors who do not want to invest a lump sum amount but want to invest regularly in mutual funds. However, investors who wish to reach the targeted amount and can monitor the market continuously and change the investment amount as per market movement, VIP is be a good option for them.

Key difference between VIP and SIP

VIP	SIP
Per month contribution changes according to the market performance	Per month contribution remains the same, irrespective of the market performance
Investment amount is decided by subtracting actual value of investment from targeted value of the same	Investment amount is fixed
It follows traditional wisdom of investing at lows and selling at highs	It follows the strategy of investing fixed amount every month
It is a value averaging method	It is a rupee cost averaging method
Require more investor participation	Requires lesser investor participation
Final return of the investment is determined by the investor and he invests to reach the same	The targeted value is not fixed by the investor. It is unknown and is determined by market conditions

DSIJ Mutual Fund Ranking:

The Unique, Forward-Looking Ranking, To Make Your Investments Grow Fastest

The following table lists top-ranked equity funds based on DSIJ's proprietary research methodology. Having a pioneering legacy of more than 32 years in equity research, we have deployed our research experience and expertise on the listed companies to ascertain expected returns on the underlying stocks of each equity fund. We have evaluated the underlying portfolio of stocks of each fund and ranked them based on their expected portfolio returns. This helped us to rank the funds without getting biased about the historical returns of the funds. This way we are also able to rank newly launched funds that are not rated by others due to their short duration of existence.

Every day, we evaluate all the equity funds based on changed ratings of the underlying stocks and change in their prices. Therefore, this list is quite dynamic and reflects the best return potential of the funds in the next one year.

We no longer need to differentiate between different styles of investments and as all the funds are ranked based purely on their return potential assuming the portfolio of funds remain constant. You can use this ranking to create your own mutual fund portfolio. Depending on your risk profile, return expectations and overall asset allocation, you can add best performing funds in particular category to your portfolio. For clarity and to include more funds, we have not included 'Direct' and closed ended funds. You can visit our website to know the latest ranking of both 'Direct' and 'Regular' Funds.

This ranking can also be used for reviewing different holdings in your fund portfolio. Hence, a consistently laggared performer of a particular category can be looked at as 'Switch' or 'Exit' advice.
